RIDER TYPE:
All-Mtn / Freeride

SHAPE:
Directional
0.8” Setback

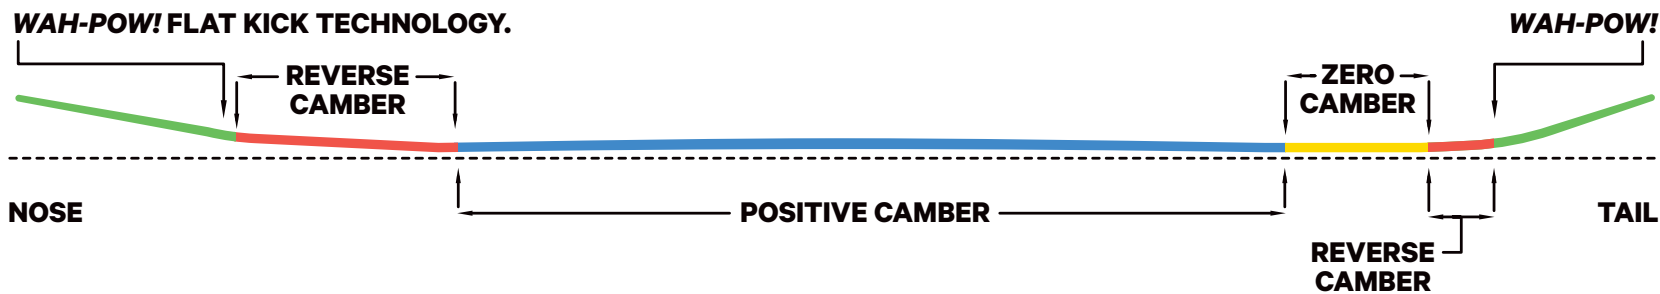

SIDECUT:
New Age
Progressive
Death Grip™

FLEX:
Directional
6.5

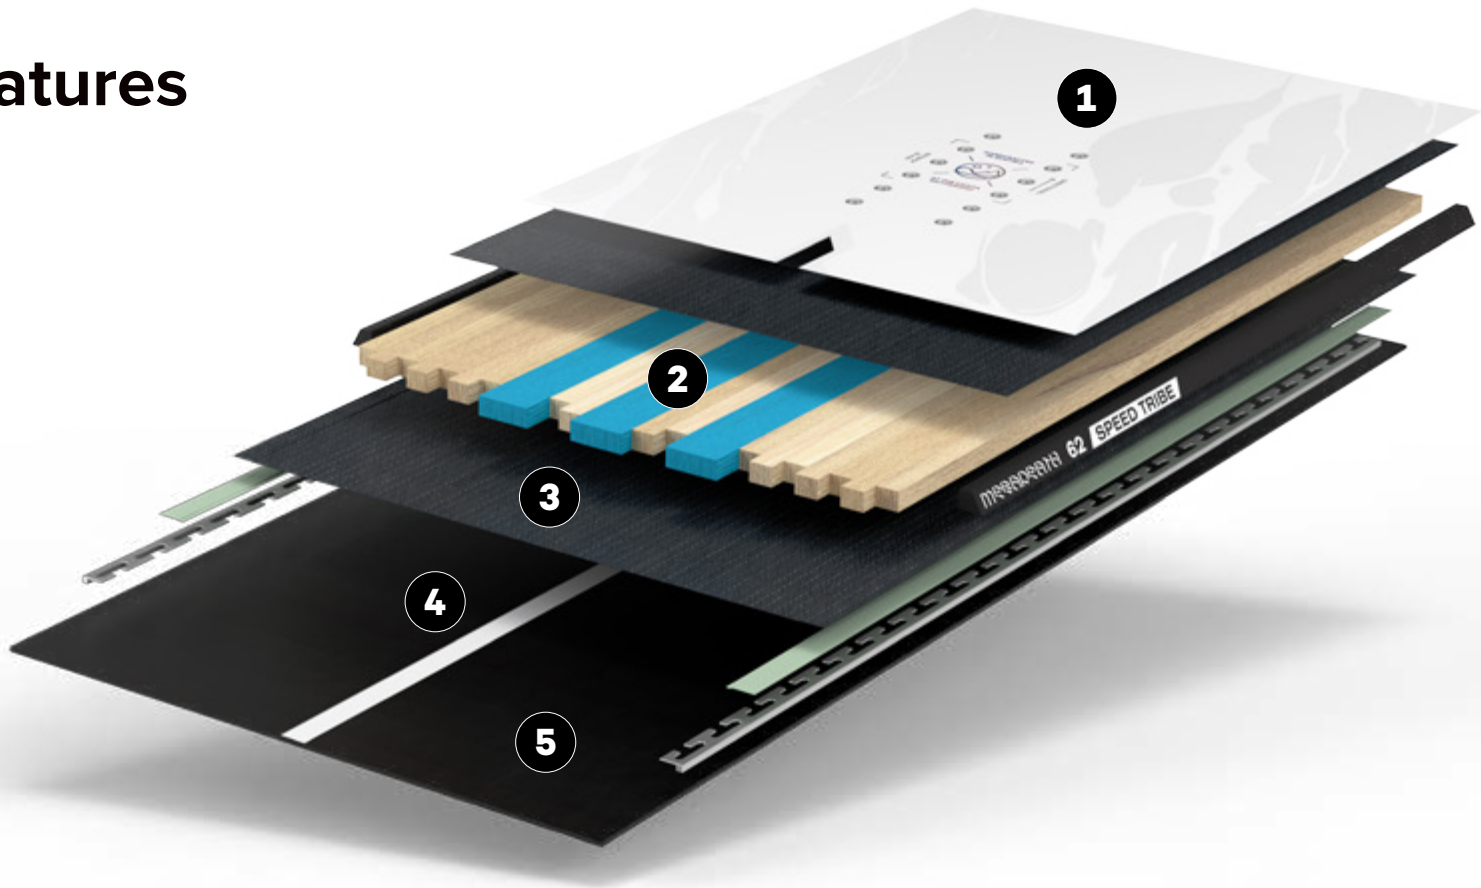

HYBRID CAMBER:
Alpine V1 Directional + Flat Kick Tech

The *ALPINE V1 Profile* design features mid-body camber with a flat tail and a reverse cambered nose. This allows for tons of pop and stability on hard pack while increasing float and landing power, improving the rider’s performance in deep snow. The camber runs longer in the tail—providing extra power for the ascent or for larger riders drawn to a dedicated wide series.

OVERVIEW	LENGTH	EFFECTIVE EDGE (mm)	WAIST	NOSE / TAIL	TAPER	SIDECUT	REF. STANCE (cm / inches)	SUGGESTED WEIGHT (lbs / kg)

OVERVIEW

SUPER D.O.A.

Resort / True Twin / Hybrid Camber

This game-changing, turbocharged wonder of the slopes has absorbed the shaping and camber theory from the most beloved snowboard in the galaxy and cranked up the construction to "Don't Panic" levels.

Designed for the intermediate to advanced all-terrain resort rider seeking the award-winning geometry of the *D.O.A.* series, in a lighter, more energetic, and responsive chassis, the *SUPER D.O.A.* isn't just any snowboard; it's a hyperdrive equipped, improbability-fueled snow-surfing machine that can help you go faster, and edge quicker.

NEW SERIES!

SIDEWINDER

Resort / Directional / Hybrid Camber

Cut deep. Lay low. Lock in.

The *Sidewinder* is your resort missile, purpose-built for carving trenches with surgical precision. With a directional shape, powerful posi-camber profile, and a torsional flex tuned to respond. This board begs to be laid on edge—and rewards riders who know how to drive.

Whether you're railing corduroy at dawn or hunting groomers at dusk, the *Sidewinder* is your new tool for arc-making glory.

SIDEWINDER

Resort / Directional / Hybrid Camber

Featuring a robust and dependable construction, the all-new *Sidewinder* proves that high performance and high value can coexist in a price-accessible carving machine. Elongated blend curves enable easy turn entry, while the tapered silhouette and articulated tail provide powerful exits—the *Sidewinder* will empower you to stalk the mountain and strike at will.

OUTERSPACE LIVING

Resort / Directional Twin / Hybrid Camber

The *Outerspace Living* features a true-twin freestyle shape blended with an all-terrain camber profile built for freeriding.

Inspired by the award-winning *Mercury* series, positive camber lies underfoot for power retention while an elevated nose and tail help the board swim through variable conditions.

Do you want to crush laps through the park after the powder is tracked out? If so, then this is the board for you.

OUTERSPACE LIVING

Resort / Directional Twin / Hybrid Camber

NEW SERIES!

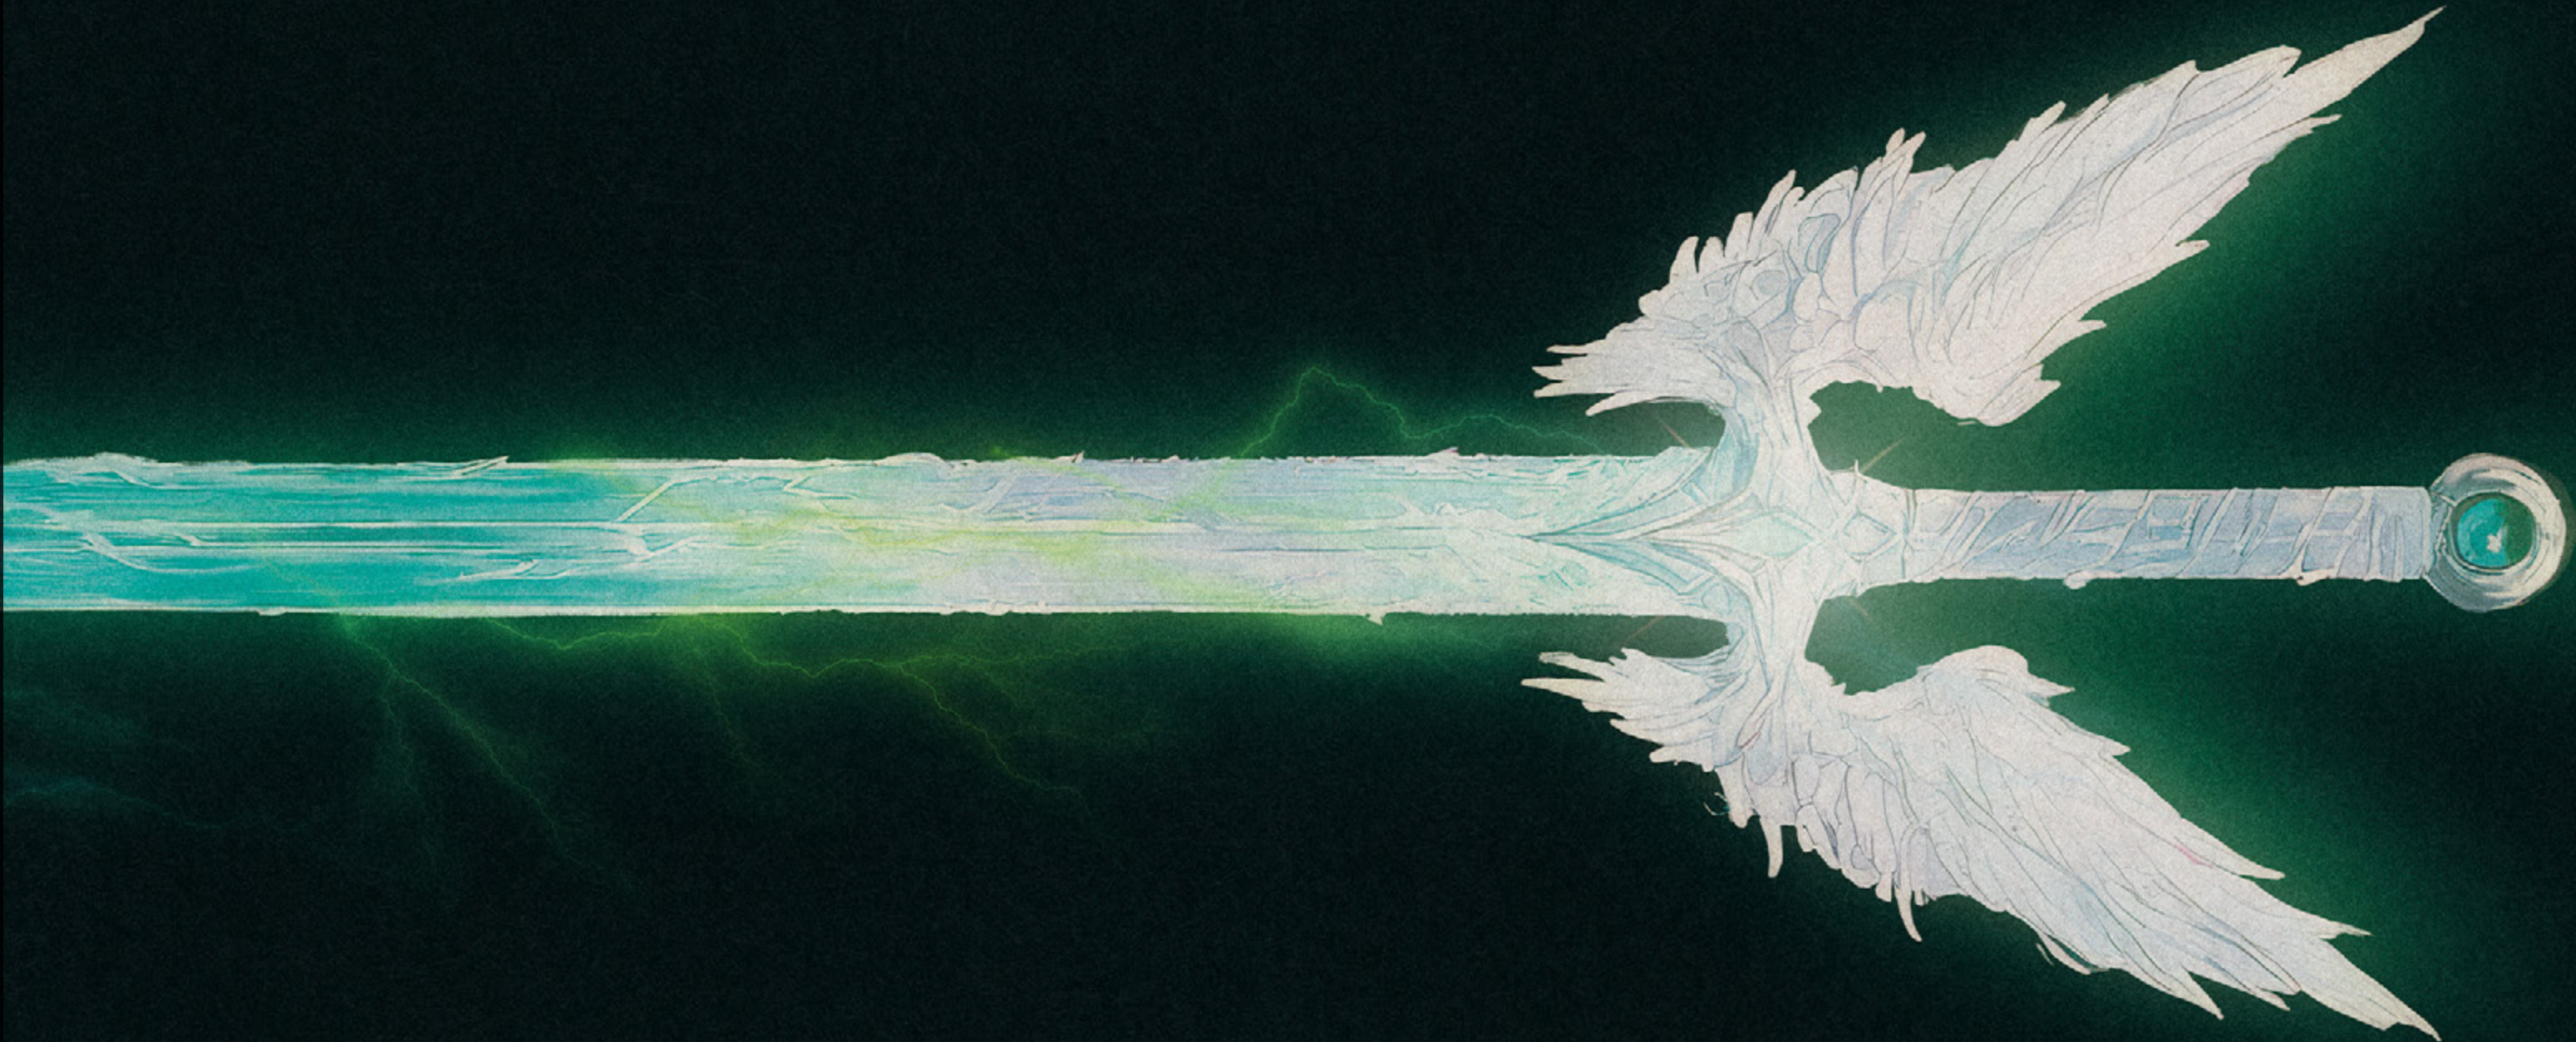

MIA BROOKES PRO

With Mia Brookes
Women's / Freestyle + Resort /
True Twin / Hybrid Camber

Make no apologies.

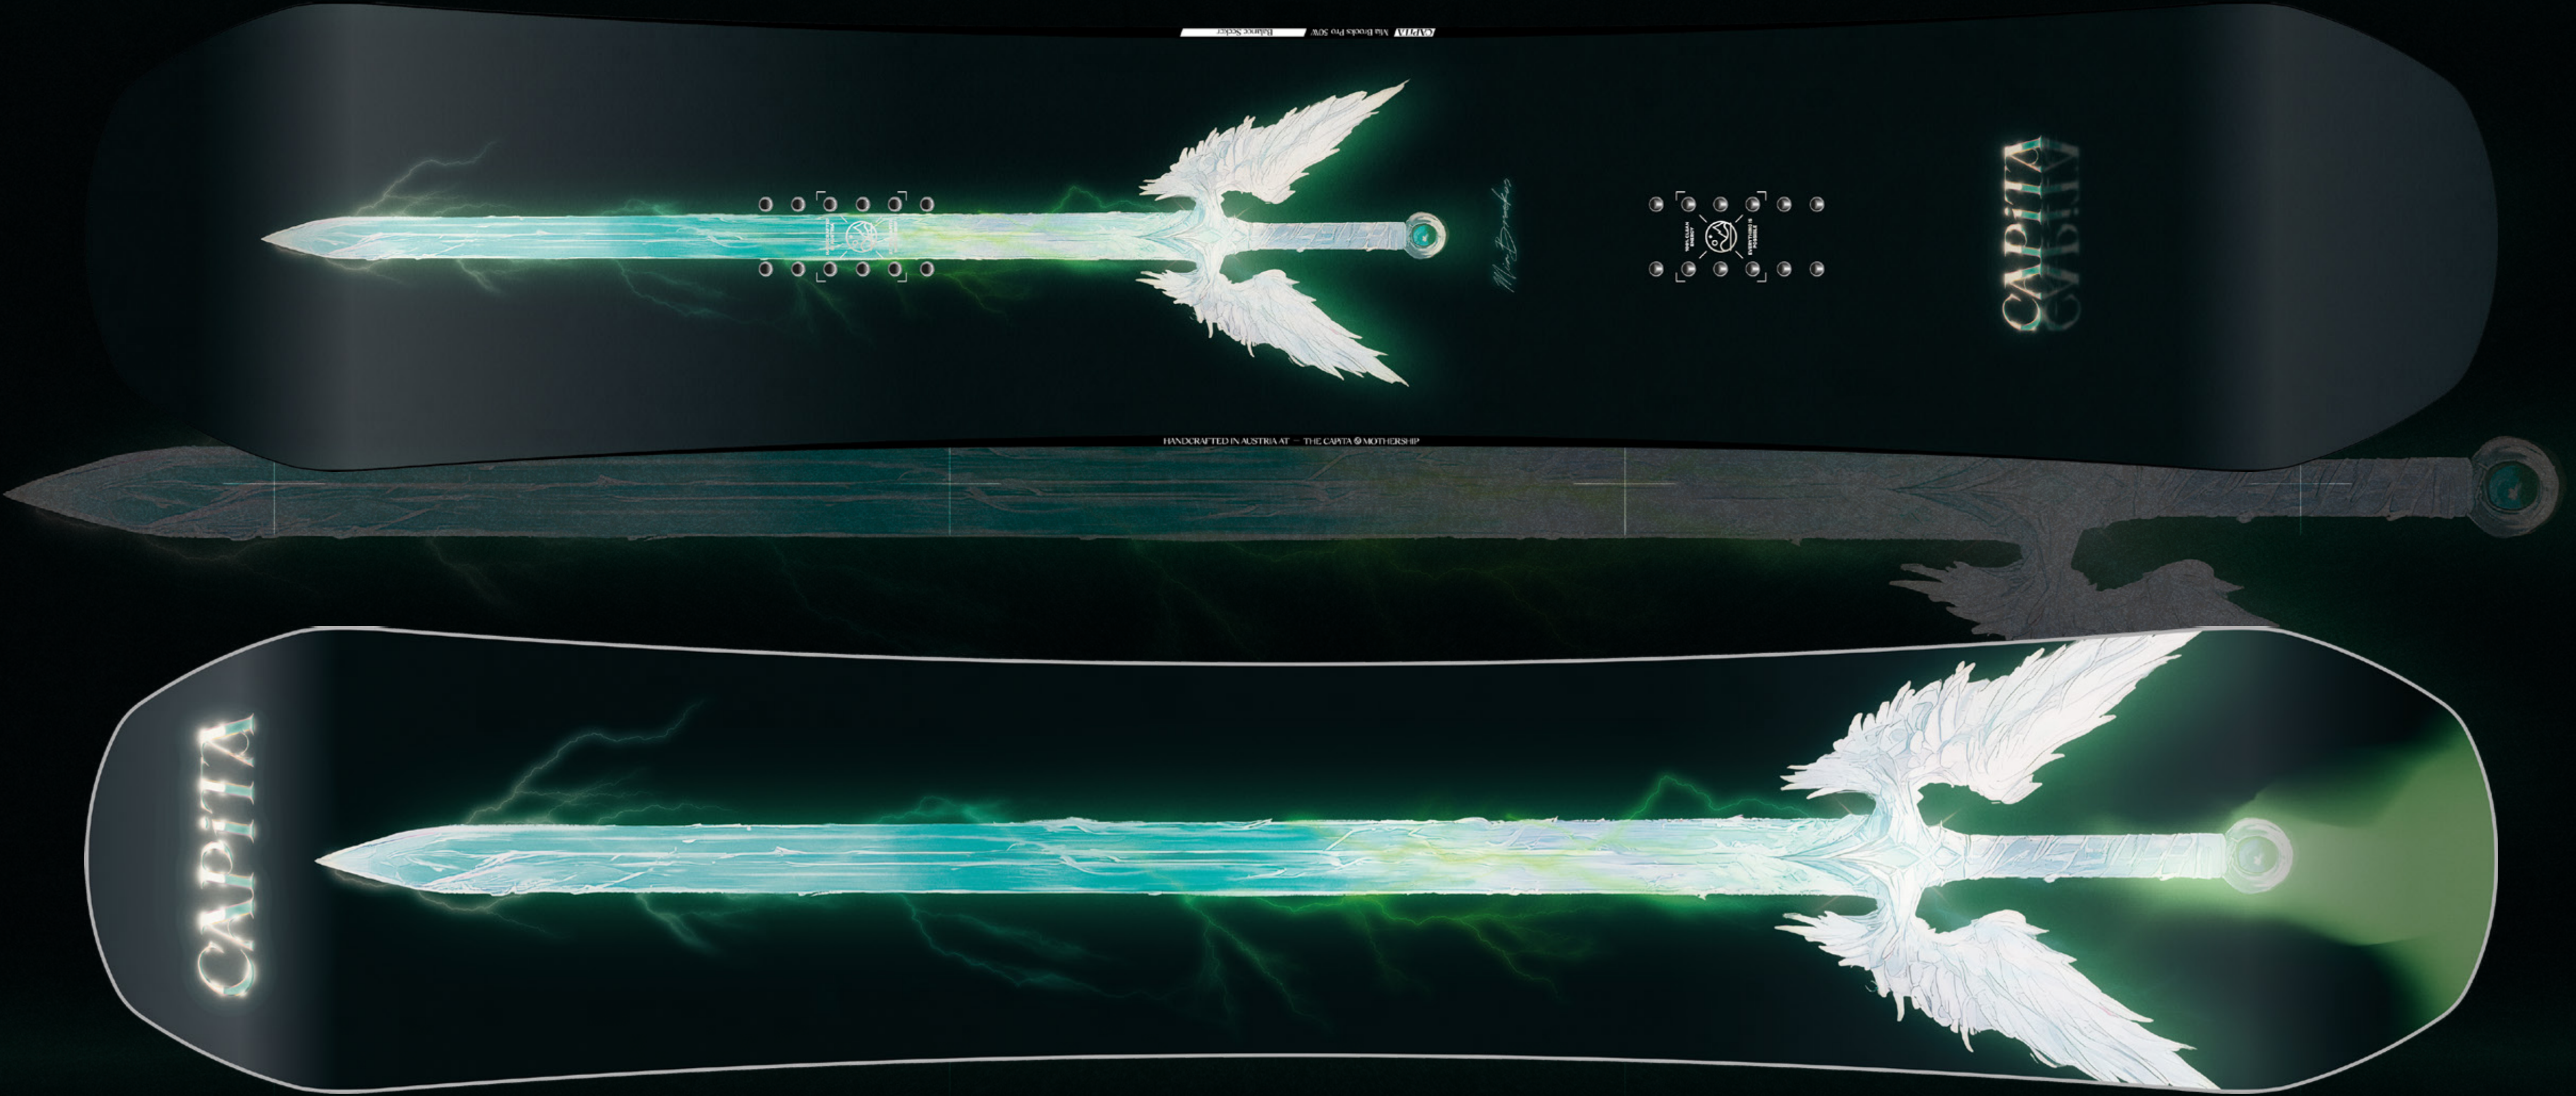

This board was built to break molds, set new standards, and leave people speechless. From casual park laps with the homies to pushing the outer limits of the sport with the world watching, this sword is a true twin-tip slayer—precision-tuned for riders who go big, spin fast, and land clean. Just like Mia.

Starting with her favorite shape, the award-winning Birds of a Feather, and charged with an upgraded core and even faster base, the MBP is more than a signature model—it's a statement. It's bold and it's got skills. Whether you're chasing big-spins or laying down your first front three, this deck is your invitation to ride louder, push harder, and define what's next.

The *Dark Horse* maximizes the power potential of a lightweight and energetic board in a budget friendly construction. It delivers the pop and power, demanded by progressive freestyle riders through its tried and trusted combination of Dual Core™ and Special Blend Fiberglass further enhanced with 2 x 20 mm Carbon Aramid Boosters.

PATHFINDER

Freestyle / True Twin / Reverse Camber

The *Pathfinder* is the perfect board for a wide range of riders looking to progress their riding at a minimal cost. It is fun, maneuverable, easy to ride and capable of big things.

The *Pathfinder* provides a user-friendly and confident chassis for riders new to the game, with plenty of upside for intermediate or advanced park riders looking for a value-packed opportunity for the next freestyle-focused resort board.

The *Pathfinder* excels in a variety of resort and freestyle terrain with the tried and trusted combination of Dual Core™ and Special Blend Fiberglass + Magic Bean™ Resin.

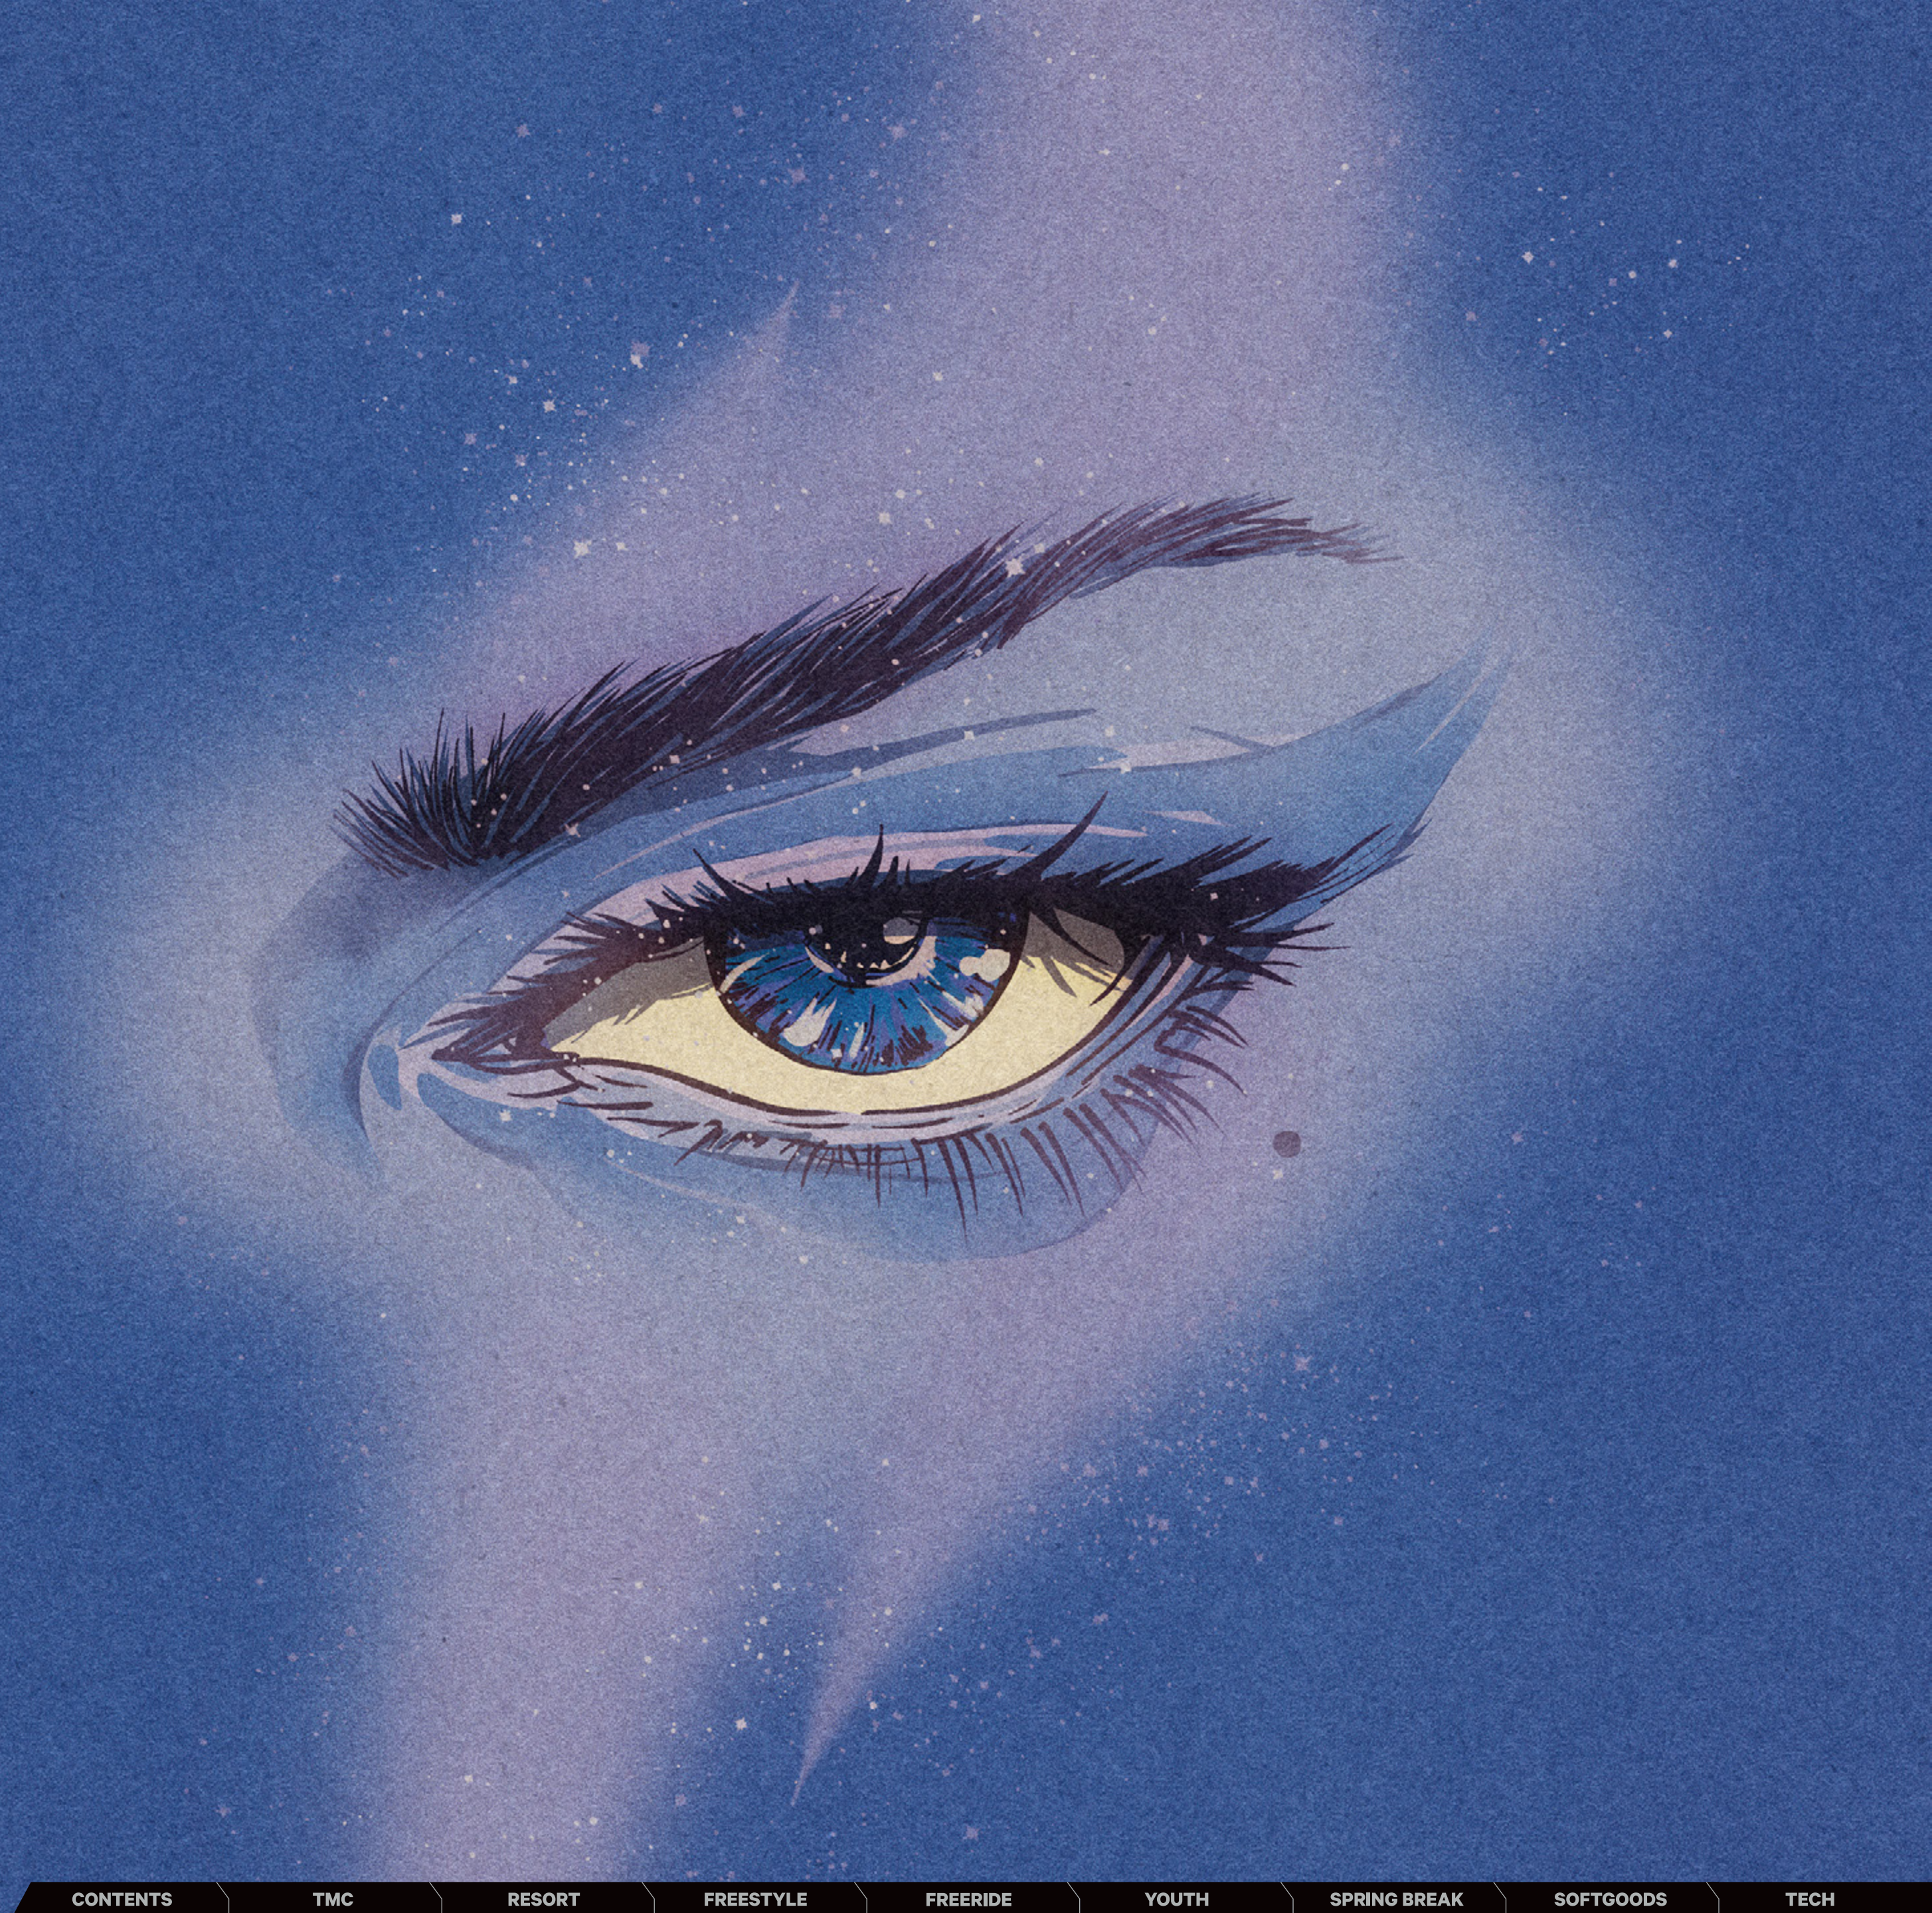

SPACE METAL

Women's / Resort + Freestyle / True Twin /
Reverse Camber

The award winning *Space Metal* is widely regarded as one of the best women's park boards on the market. However, to be fair, labeling it as a park board severely understates its potential.

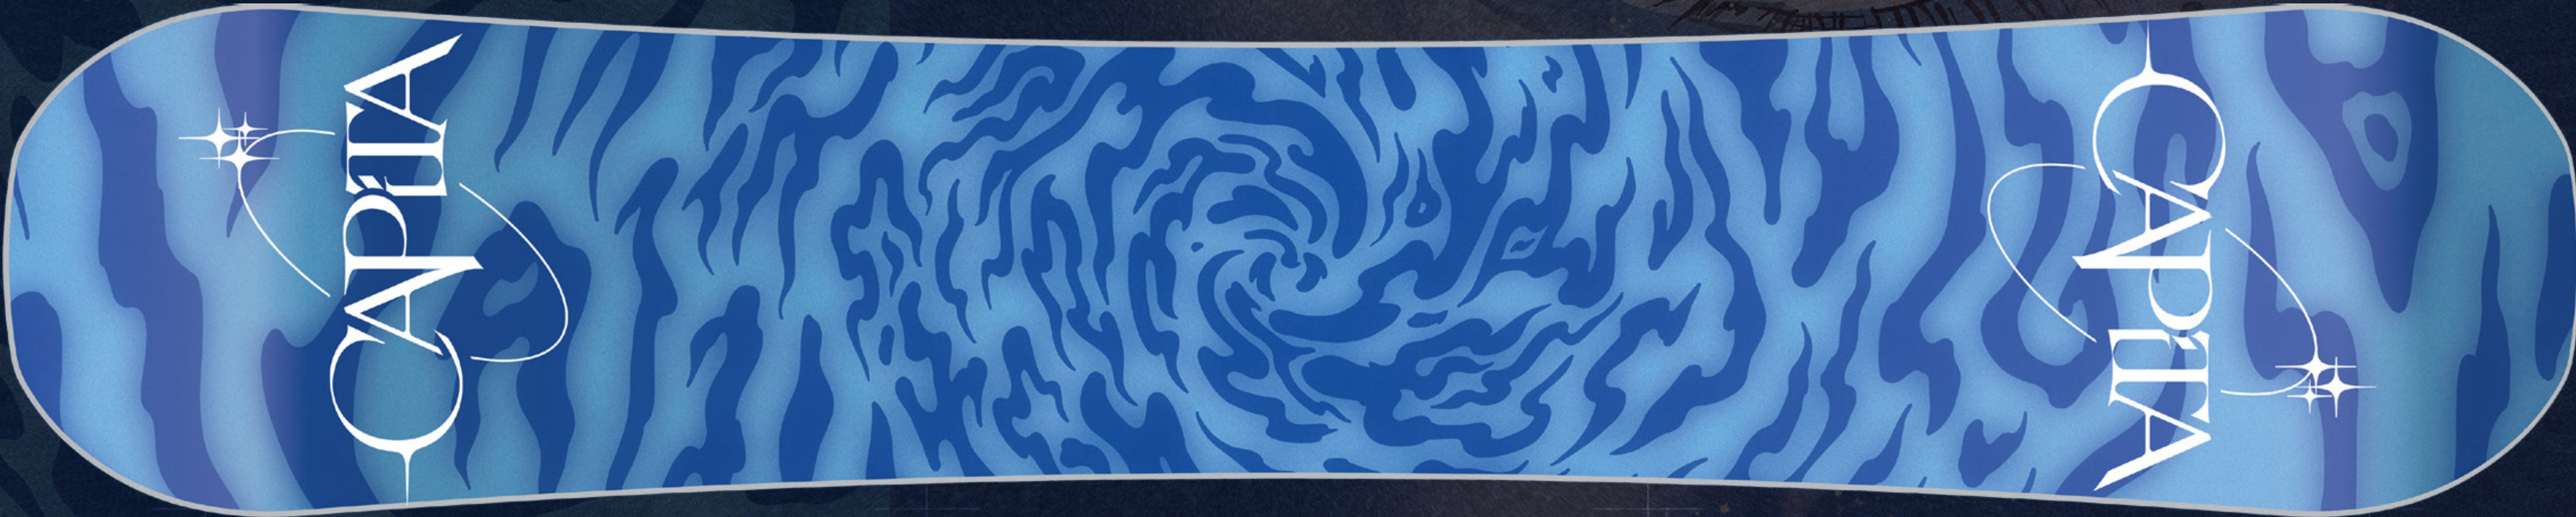

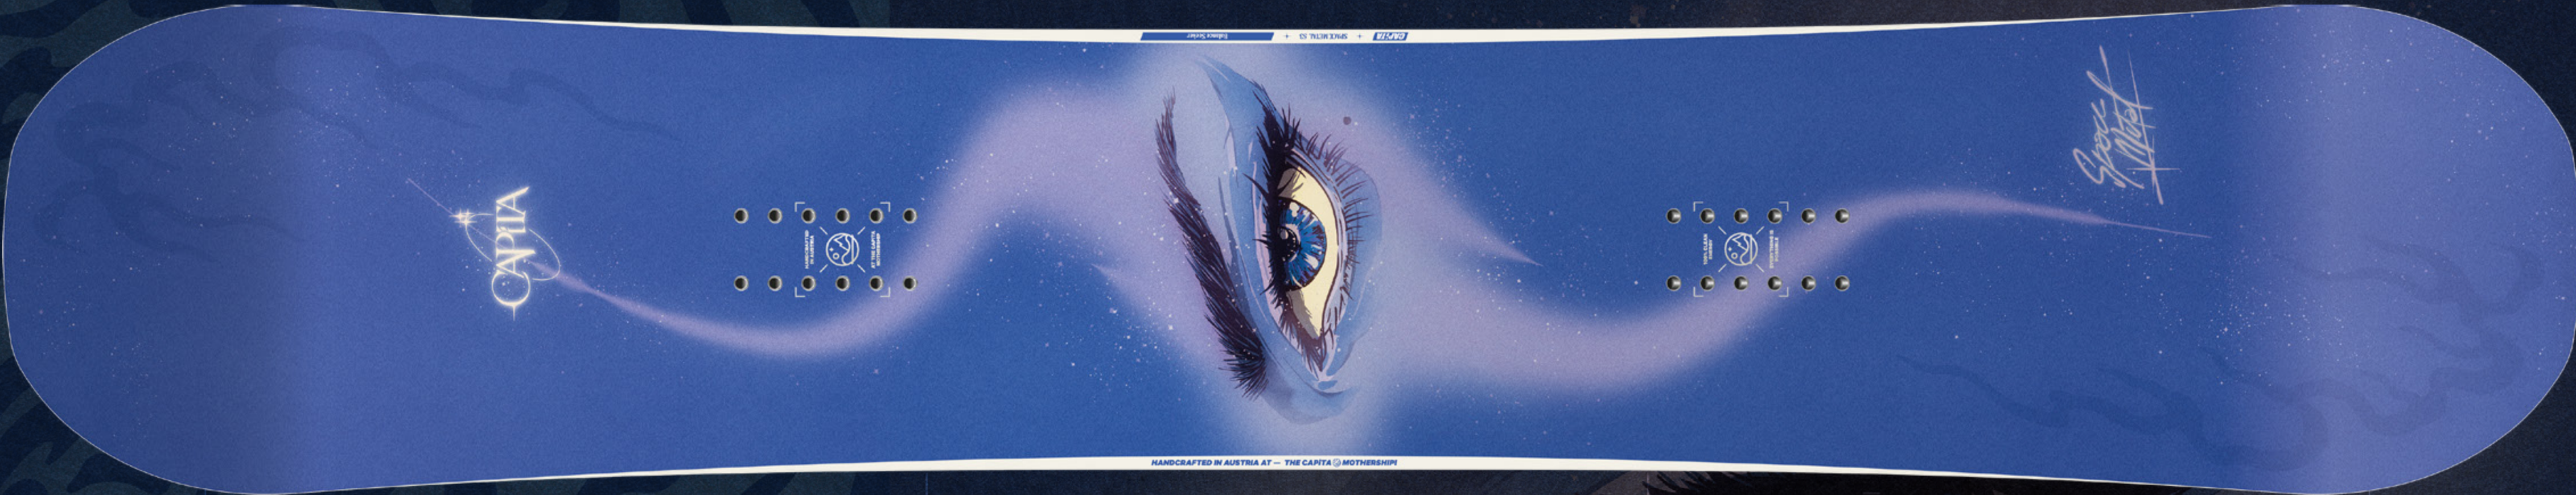

We present it as a park series for classification purposes, but in truth, it's much more than that. The *Space Metal Fantasy* is fun for carving around the slopes, playing on features in the park, and even floats ridiculously well in powder.

This very forgiving reverse camber shape provides a fun experience for beginner to intermediate riders looking to expedite the learning curve and take their riding to the next level on many different types of terrain.

THE MATRIARCH

With Torstein Horgmo
Resort / Directional / Traditional Camber

Unlock aspirational precision and natural terrain flow with *The Matriarch*—a snowboard shaped by the mind of *Torstein Horgmo*.

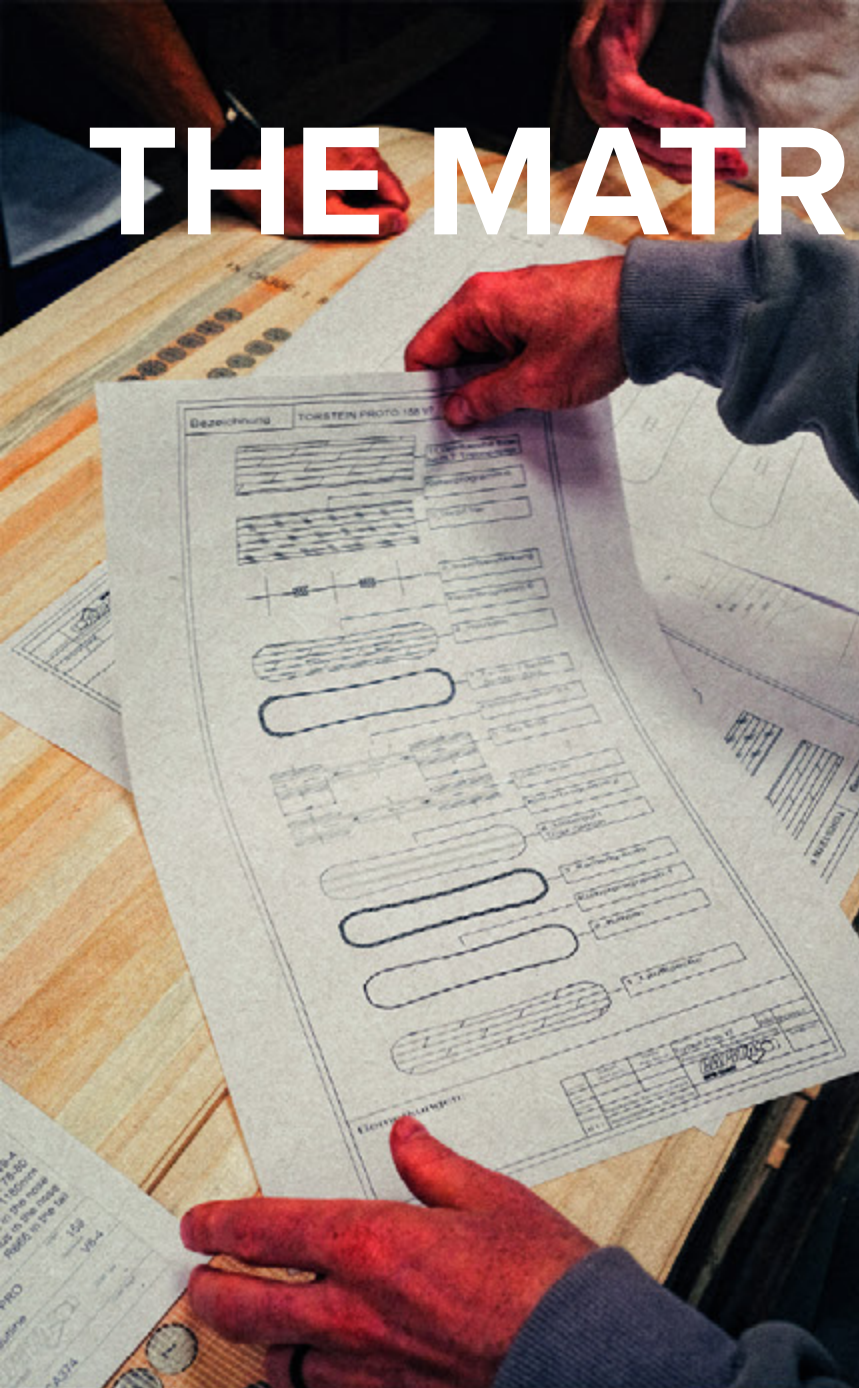

This directional cambered offering is built for riders who see the mountain not just for what it is, but for what it could be: a place where freestyle creativity meets the expanse of backcountry possibilities.

With explosive pop, dynamic control, and effortless float, *The Matriarch* thrives on natural features and diverse snowpack. From backcountry transitions to in-bound powder laps and variable all-mountain conditions, it blurs the line between instinct and intention—inviting riders to draw their own lines with power, style, and purpose.

Introducing the new Transcend Core™ and Fairmat™ carbon amplifiers, this lightweight and agile chassis offers maximum control and versatility through varied conditions.

THE BLACK SNOWBOARD OF DEATH

All-Mtn + Freeride / Directional / Hybrid Camber

The Black Snowboard of Death has achieved legendary status as an all-terrain slayer, boasting an impressive collection of accolades. Over the last 25 years, it has undergone constant evolution and modification in the relentless pursuit of perfection. The one constant amidst these changes has been its iconic name.

Featuring a finely balanced directional shape and high-powered construction, this custom-designed rocketship offers exceptional control, enabling riders to elevate their skills and navigate varying terrain and changing conditions with confidence.

HYBRID CAMBER:
Alpine V1 Directional + Flat Kick Tech

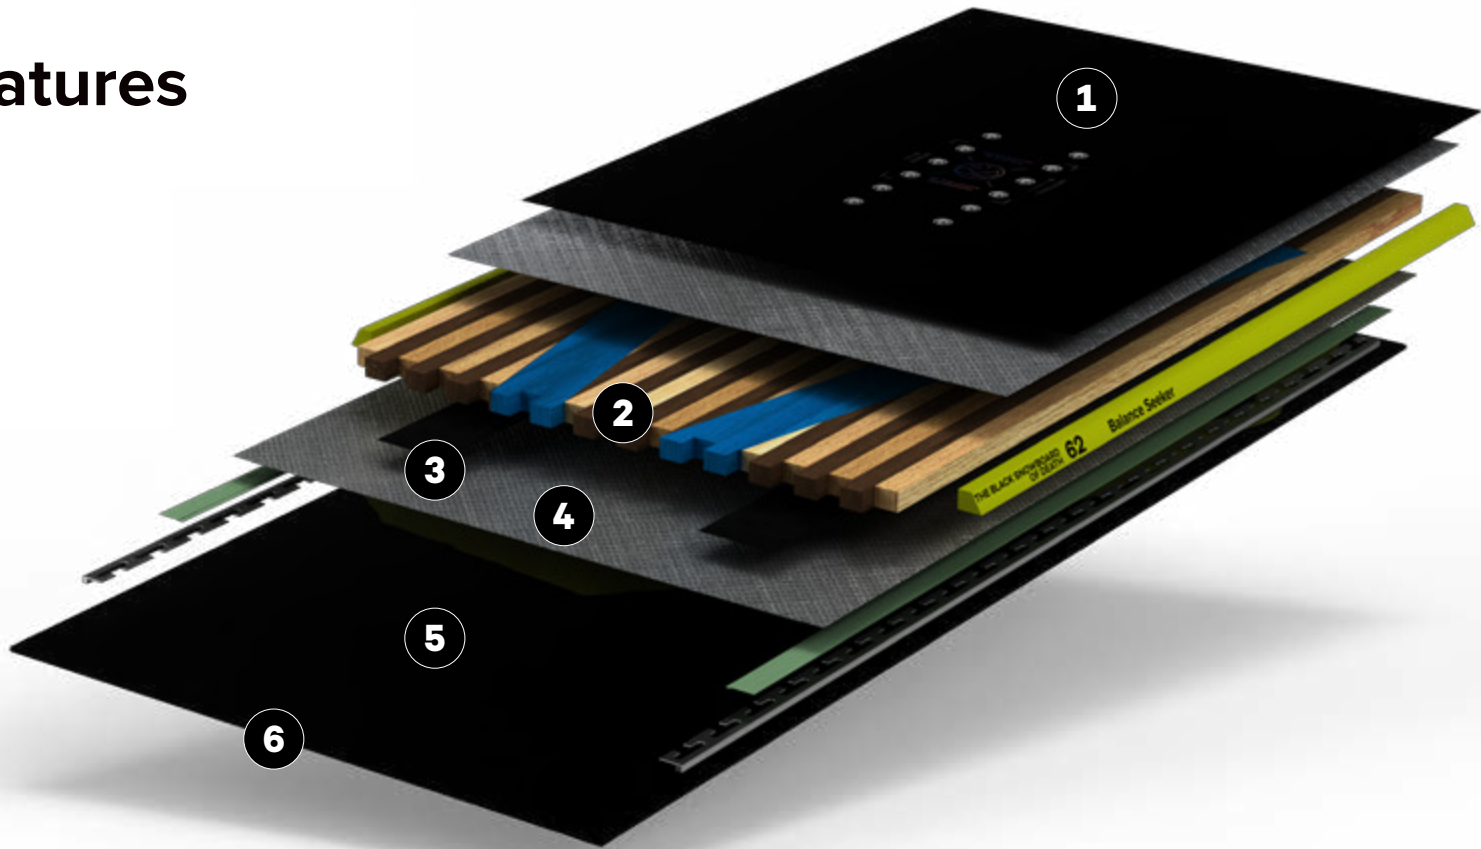

The *ALPINE V1 Profile* design features mid-body camber with a flat tail and a reverse cambered nose. This allows for tons of pop and stability on hard pack while increasing float and landing power, improving the rider’s performance in deep snow. The camber runs longer in the tail—providing extra power for the ascent or for larger riders drawn to a dedicated wide series.

KAZU KOKUBO PRO

All-Mtn + Freeride / Directional / Hybrid Camber

Fast and powerful, this is the switchblade of powder boards.

The *Kazu Kokubo Pro* comes in a compact chassis with a powder nose and a slightly tapered tail, making this award-winning series quick and maneuverable.

This versatility is perfect for side-country powder mornings that transition to resort riding after you've tracked your secret stash. And, while it's a lofty goal, this board is your first step towards trying to emulate Kazu's legendary riding style.

NEW SERIES!

ARTEMIS

All-Mtn + Freeride / Directional / Hybrid Camber

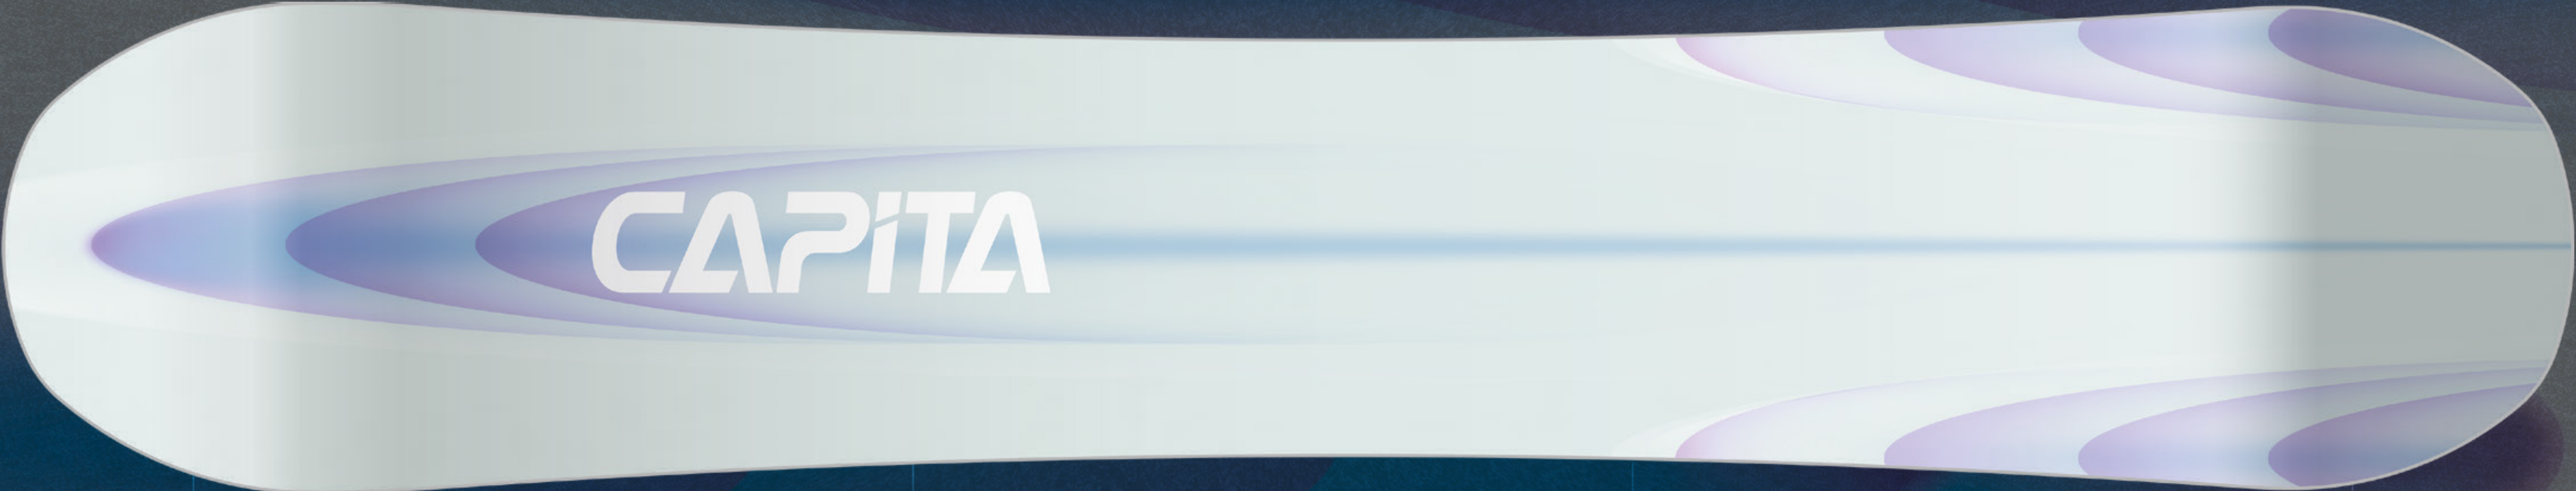

The *Artemis* is an all-new high-performance snowcraft built for women who ride mountains with precision, power, and purpose. From back bowls and sidecountry fall lines to technical trees and mid-afternoon chop, this board is engineered to handle the full spectrum of big mountain terrain.

Featuring a directional freeride shape with responsive camber underfoot, complemented by a float-enhancing nose profile, the *Artemis* delivers edge hold you can trust and buoyancy when it matters most. Premium construction keeps it light and lightning-fast, while the tuned flex profile inspires confidence at speed.

Born of myth, built for the mountains, and guided by instinct, the *Artemis* is your opportunity to tame the wild.

The *Artemis* is designed for empowered freeriders seeking terrain versatility in one board setup—control when you want it, float when you need it, and the ability to handle any day, whether you check the snow report or not.

OVERVIEW

THE NAVIGATOR

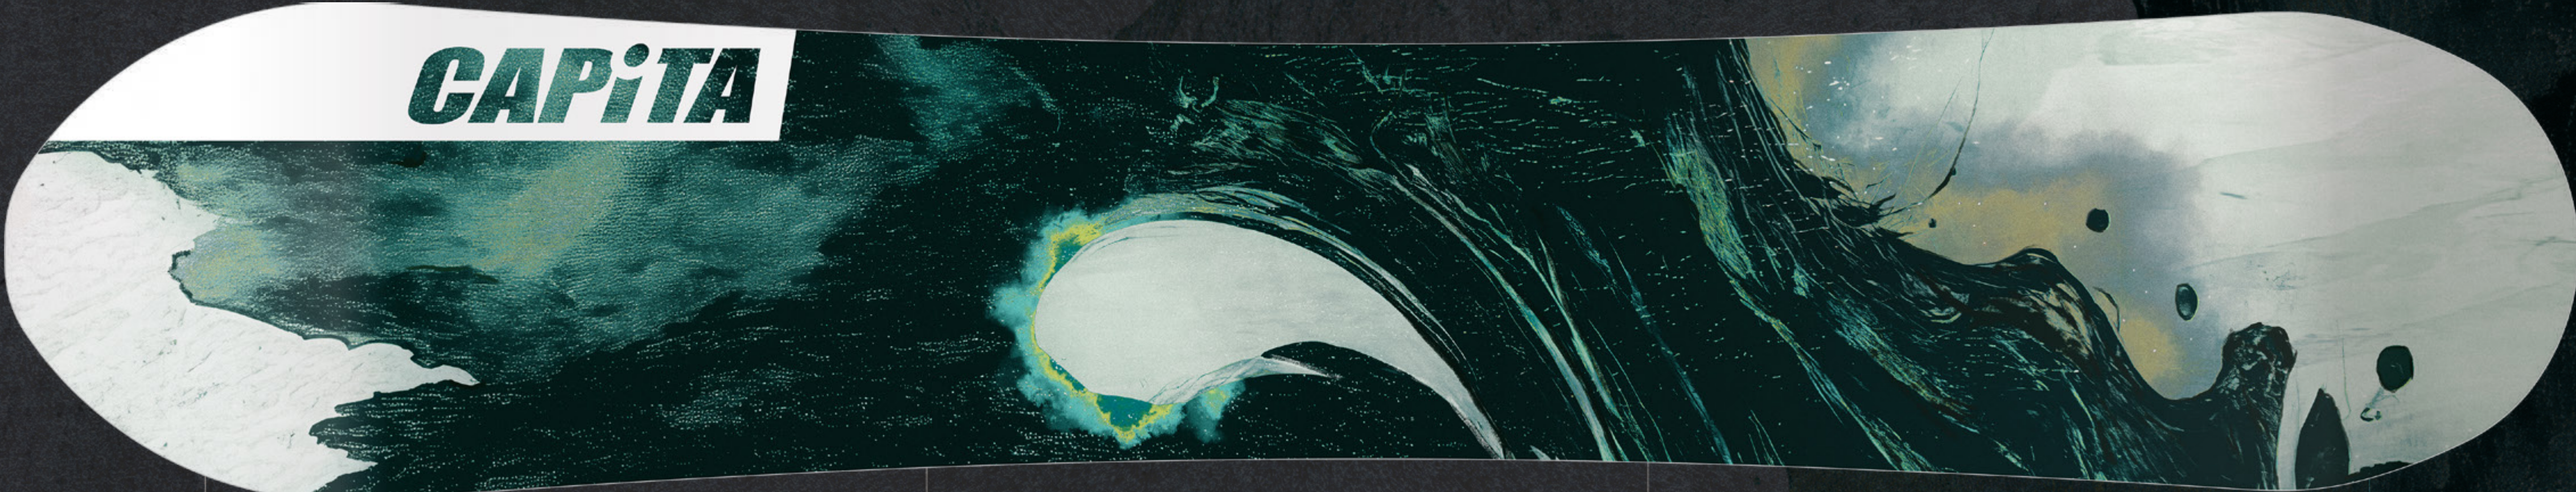

Powder + Resort / Directional / Hybrid Camber

Riding powder is like hiking into a backcountry camping trip. Once you're past the trailhead, if you have the right gear, there's nothing better. If you packed the wrong kit, there's nothing worse. The Navigator is your fire starter; it is your unwavering compass. It is essential to the experience.

This powder-annihilating series features a parabolic sidecut and a sinking tapered tail to swim through the soft stuff while the wide-frame rockered nose naturally floats above deep snow. The resulting shape transforms tiring powder days into emotionally fulfilling outdoor experiences.

THE EQUALIZER

With Jess Kimura

Women's / All-Mtn + Freeride / Directional /
Hybrid Camber

Inspired by *Jess Kimura's* progression from the streets to the backcountry, *The Equalizer* was born to level the playing field on the mountain and offer riders a high-end all-mountain option designed specifically for women.

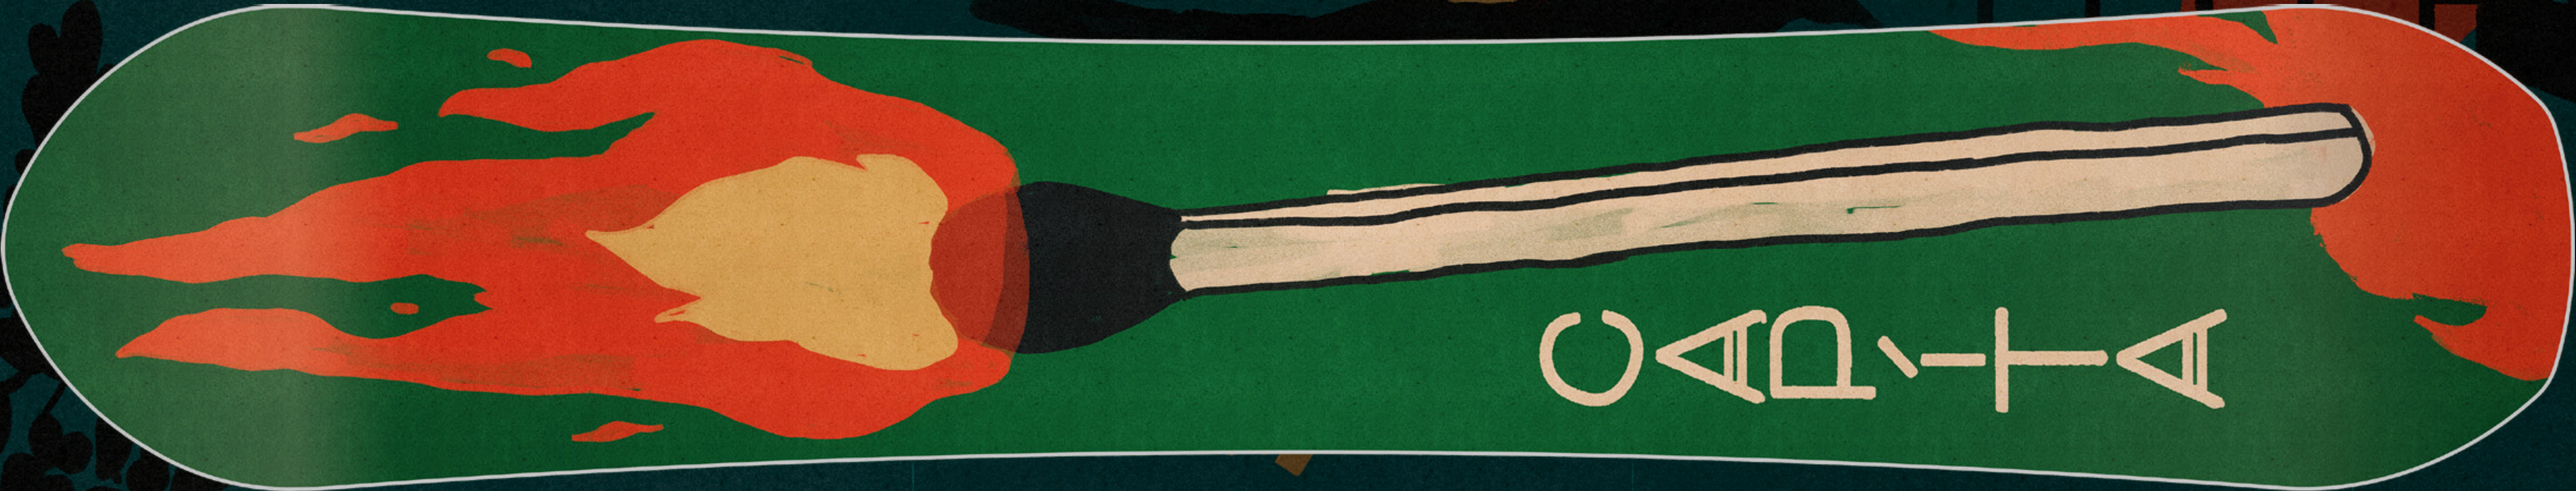

The series now features an updated custom designed hybrid camber profile, providing positive camber through the length of the board for carving control, while reverse camber in the nose and tail maximizes float in powder.

MICRO MINI

CHILDREN OF THE POW

Youth / Powder + Resort / Directional / Reverse Camber

The *Children of the Pow* is designed as a powder-specific youth board for the next generation.

It is specifically for the ‘tween-age’ young guns ready to seek side-country slashes and epic pow stashes; it’s for younger riders who want more float and a board designed for powder.

With a progressive shape, and a camber profile inspired by the notorious Spring Break Snowboards series, the *Children of the Pow* will open worlds of new terrain for young shredders during those in-between years.

CHILDREN OF THE POW

THE GLOW UP

BY JESS KIMURA

Youth / Resort + Park / True Twin / Traditional Camber

Confidence starts here.

The Glow Up is built for teen and pre-teen girls ready to level up—whether they're new on the progression train, or already riding the park with style.

Designed as the ideal progression board between kid-specific decks and full-sized models in both price and construction, *The Glow Up* blends a confidence-building flex with true all-terrain capability. It's forgiving enough to learn on, yet packed with the tech required to grow with every new skill for more advanced riders.

Crafted at The Mothership™ using 100% clean energy, *The Glow Up* doesn't just ride well—it rides responsibly. This is the go-anywhere, do-anything freestyle board for girls who are already ripping or just getting started... and shining either way.

Inspired by *Jess Kimura*, the all-new *Glow Up* series features shapes designed to facilitate skill building and progression for young riders in and out of the park. With a proven camber profile inspired by the team favorite Dark Horse series and a lightweight yet durable construction, *The Glow Up* is forgiving and easy to ride while maintaining the pop and durability required to empower the next generation of girls who rip.

YOUTH BRIGADE

Youth / Resort + Park / True Twin / Traditional Camber

The *Youth Brigade* is built for tween-agers who charge and are hungry for more. Whether they're dialing in their first spins, boosting side hits, or ripping top-to-bottom park laps, this board was born to put the pedal to the metal.

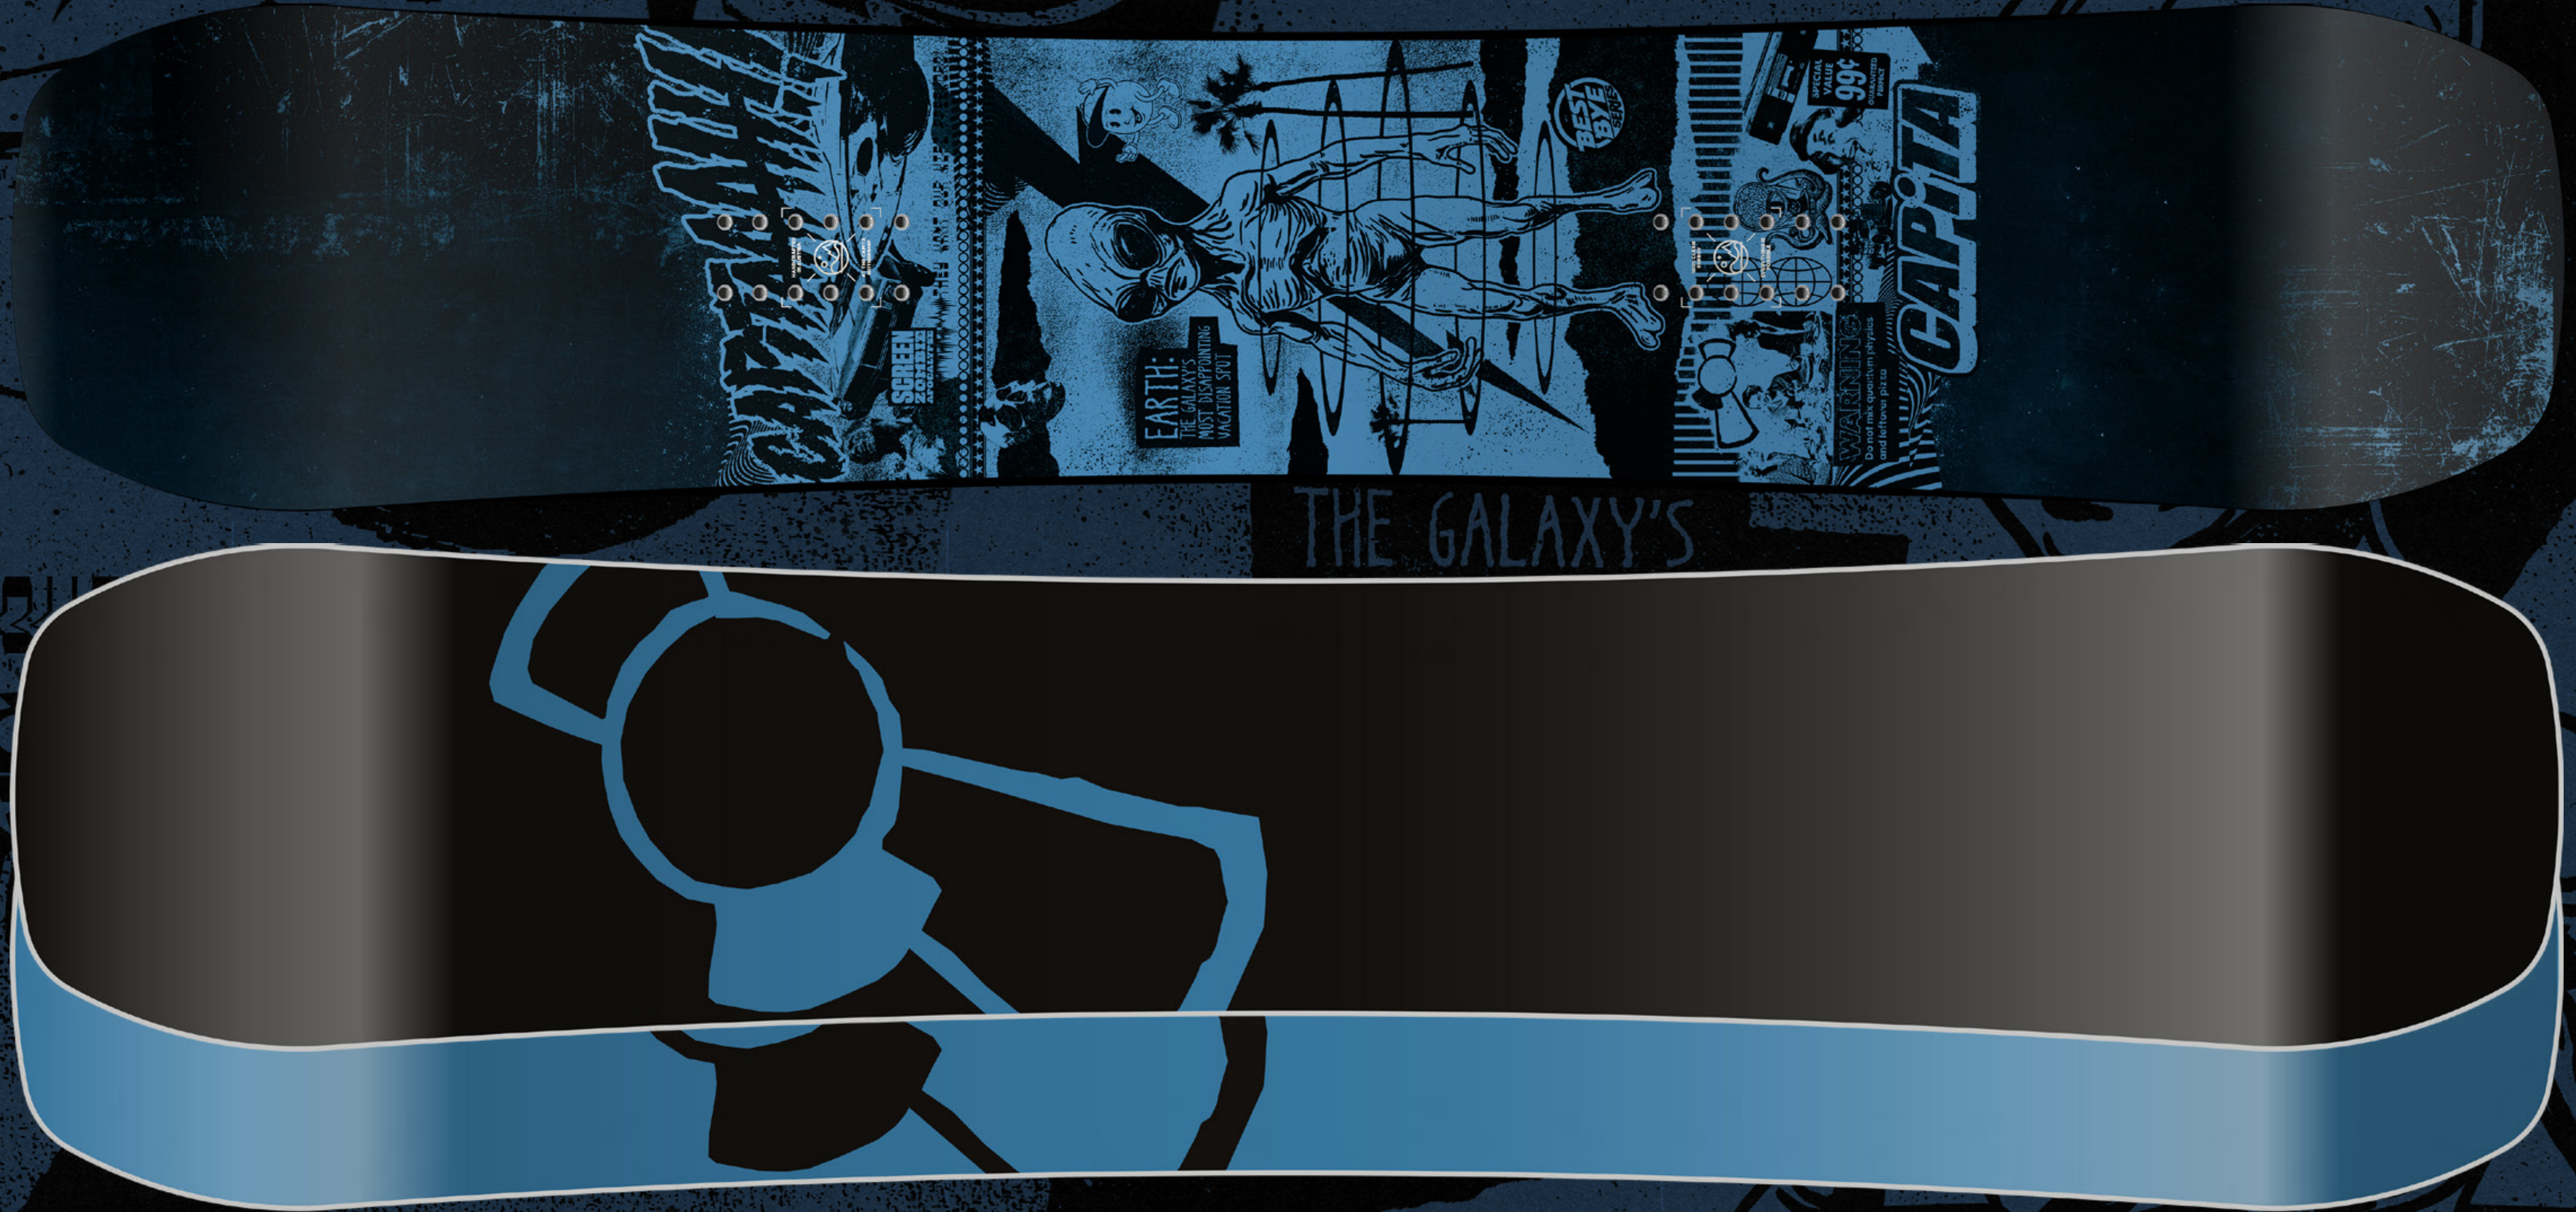

Bridging the gap between kid-specific decks and full-sized boards in both price and construction, the *Youth Brigade* delivers progression-tuned performance with real all-mountain capability. Its stable yet responsive flex helps develop control and power, while staying playful enough to fuel creativity across a wide range of terrain and ability levels.

From groomers to jump lines, the *Youth Brigade* is progression gear for the next generation of snowboarding.

MICRO MINI

Youth / Resort + Park / True Twin / Reverse Camber

The *Micro Mini* is the perfect board for kids getting their first experiences in the snowboarding game.

Redesigned from the ground up, this new series features a new shape and sidecut to enhance the learning curve for young guns and new riders.

With a target age range from 2 years old on the 80, and upward of 8 years old on the 100, these are great learning boards when the length of the board reflects a range approximately between the distance from the floor to the rider's chin and brow.

With a custom engineered design to ensure ease of use, the *Micro Mini* is the ideal board for early turning and learning experiences.

The *Powder Glider* is built with a premium Surflite 4.0 Core™ and Carbon Fleece Power Shields™ for ultralight weight toughness. Combined with a wide-framed nose and directional shape with tons of taper, the ultimate floatation performance is achieved.

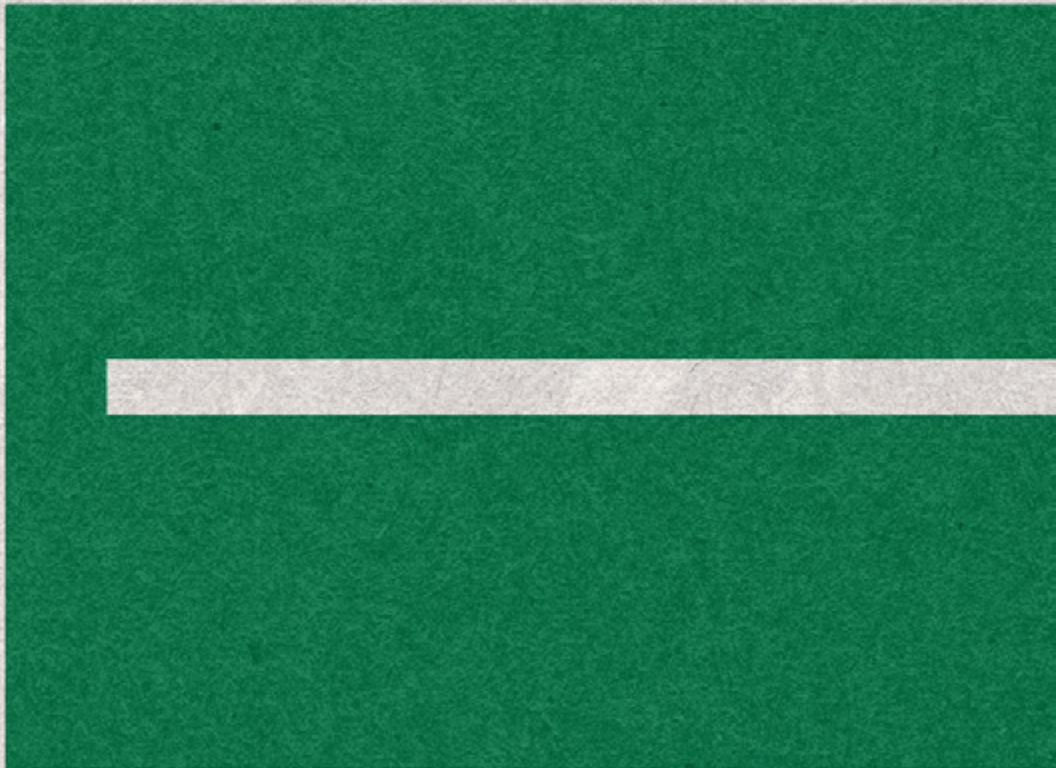

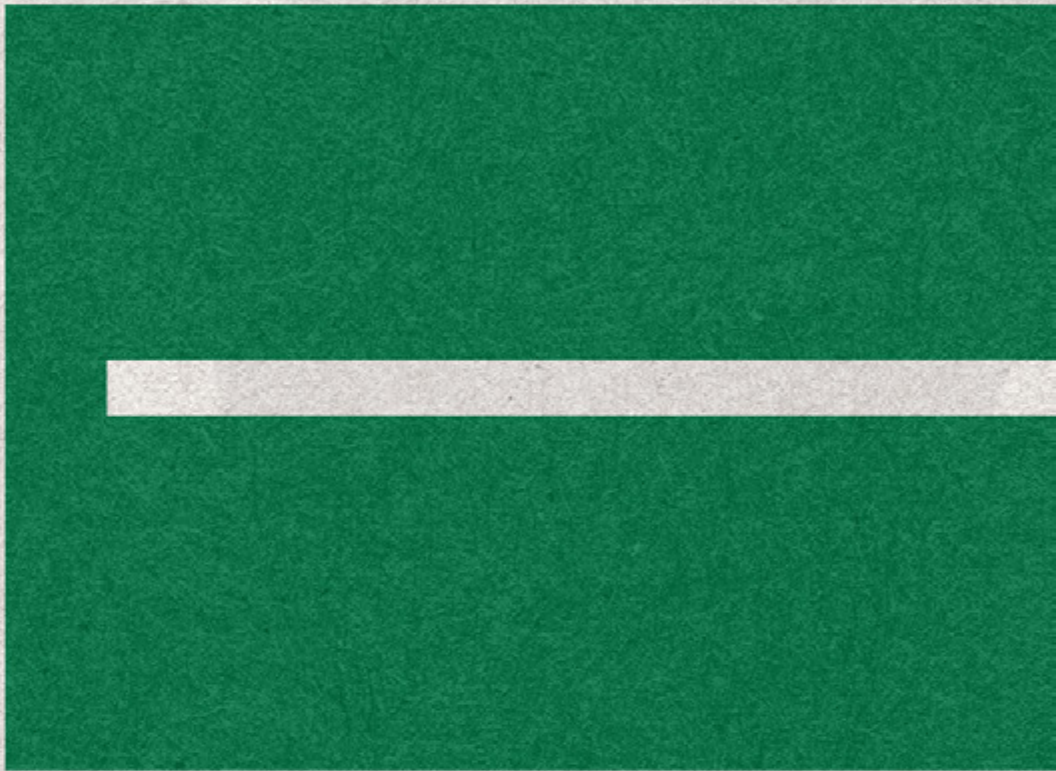

OVERVIEW

SB POWDER RACERS

Powder + Resort / Directional / Hybrid Camber

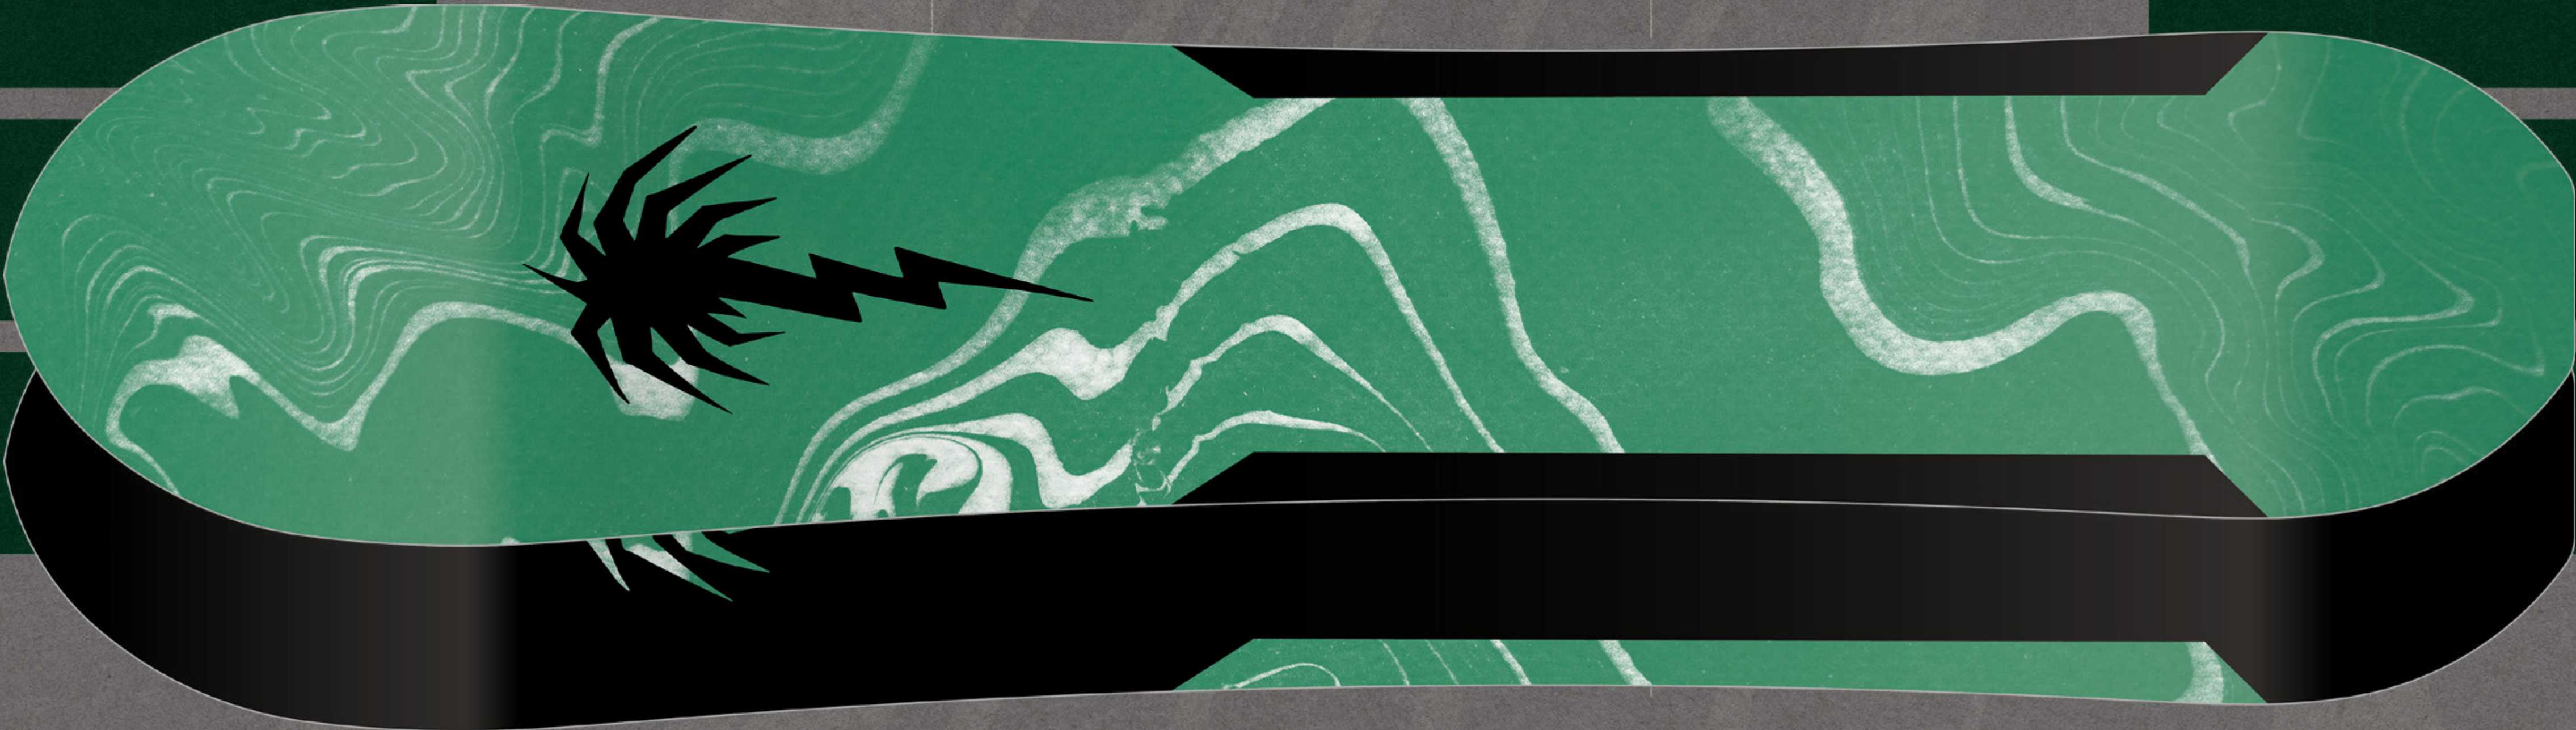

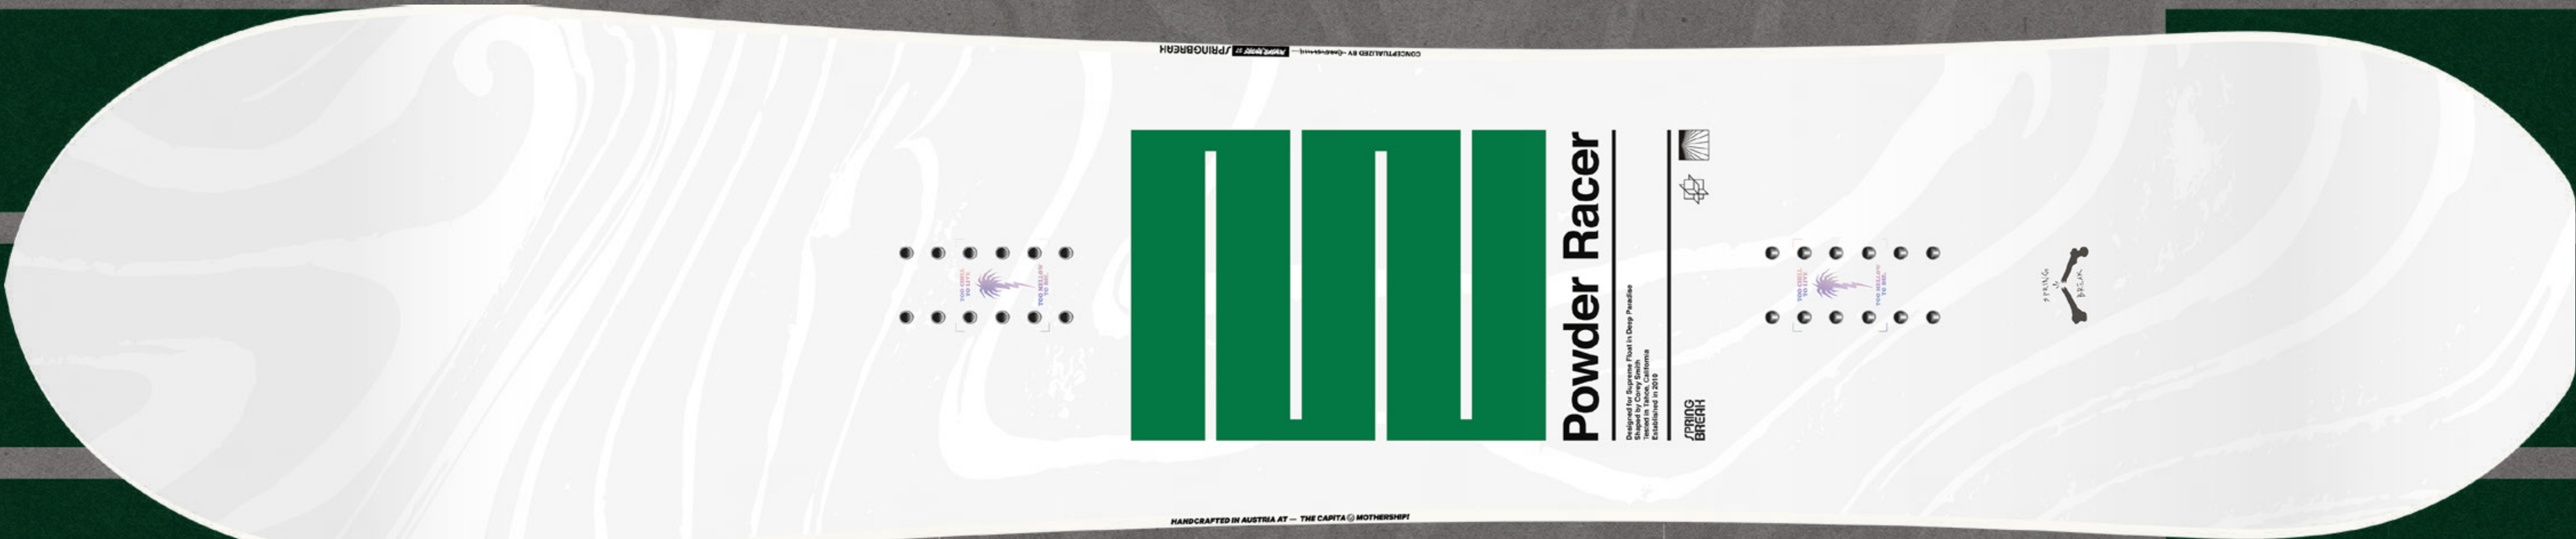

The *Spring Break Powder Racers* utilize one of the best-selling shapes from the sought-after Spring Break Ultralight Archives with a more accessibly priced construction.

Utilizing a large surface area to increase floatation and deep sidecuts to carve up the slopes, the *Powder Racers* produce party vibes in powder and on groomers alike.

OVERVIEW

SB POWDER TWIN

Powder + Resort / True Twin / Hybrid Camber

This ain't no business-in-the-front and party- in-the-back type product. It's all business and all party, and it's like that all the time.

With a rarely seen symmetrical approach to party boarding, we present you with the *Spring Break Powder Twin*. Yep, it looks like a twin-tip park board but guess what? It retains many of the geometric theories that have made Spring Break Snowboards legendary in powder—and on the corduroy.

OVERVIEW

SB RESORT TWIN

Park + Resort / True Twin / Hybrid Camber

The *Spring Break Resort Twin* aligns the unique vibe of Spring Break tropical snowboarding with a proper twin freestyle shape aimed at the masses.

With waist-widths more in-line with conventional freestyle and resort snowboards and an iconic twin silhouette respectful of its big brother, the *SB Powder Twin*, these are your everyday resort shreds for fans of Spring Break.

SB STAIRMASTER

Park + Resort / Twin / Traditional Camber

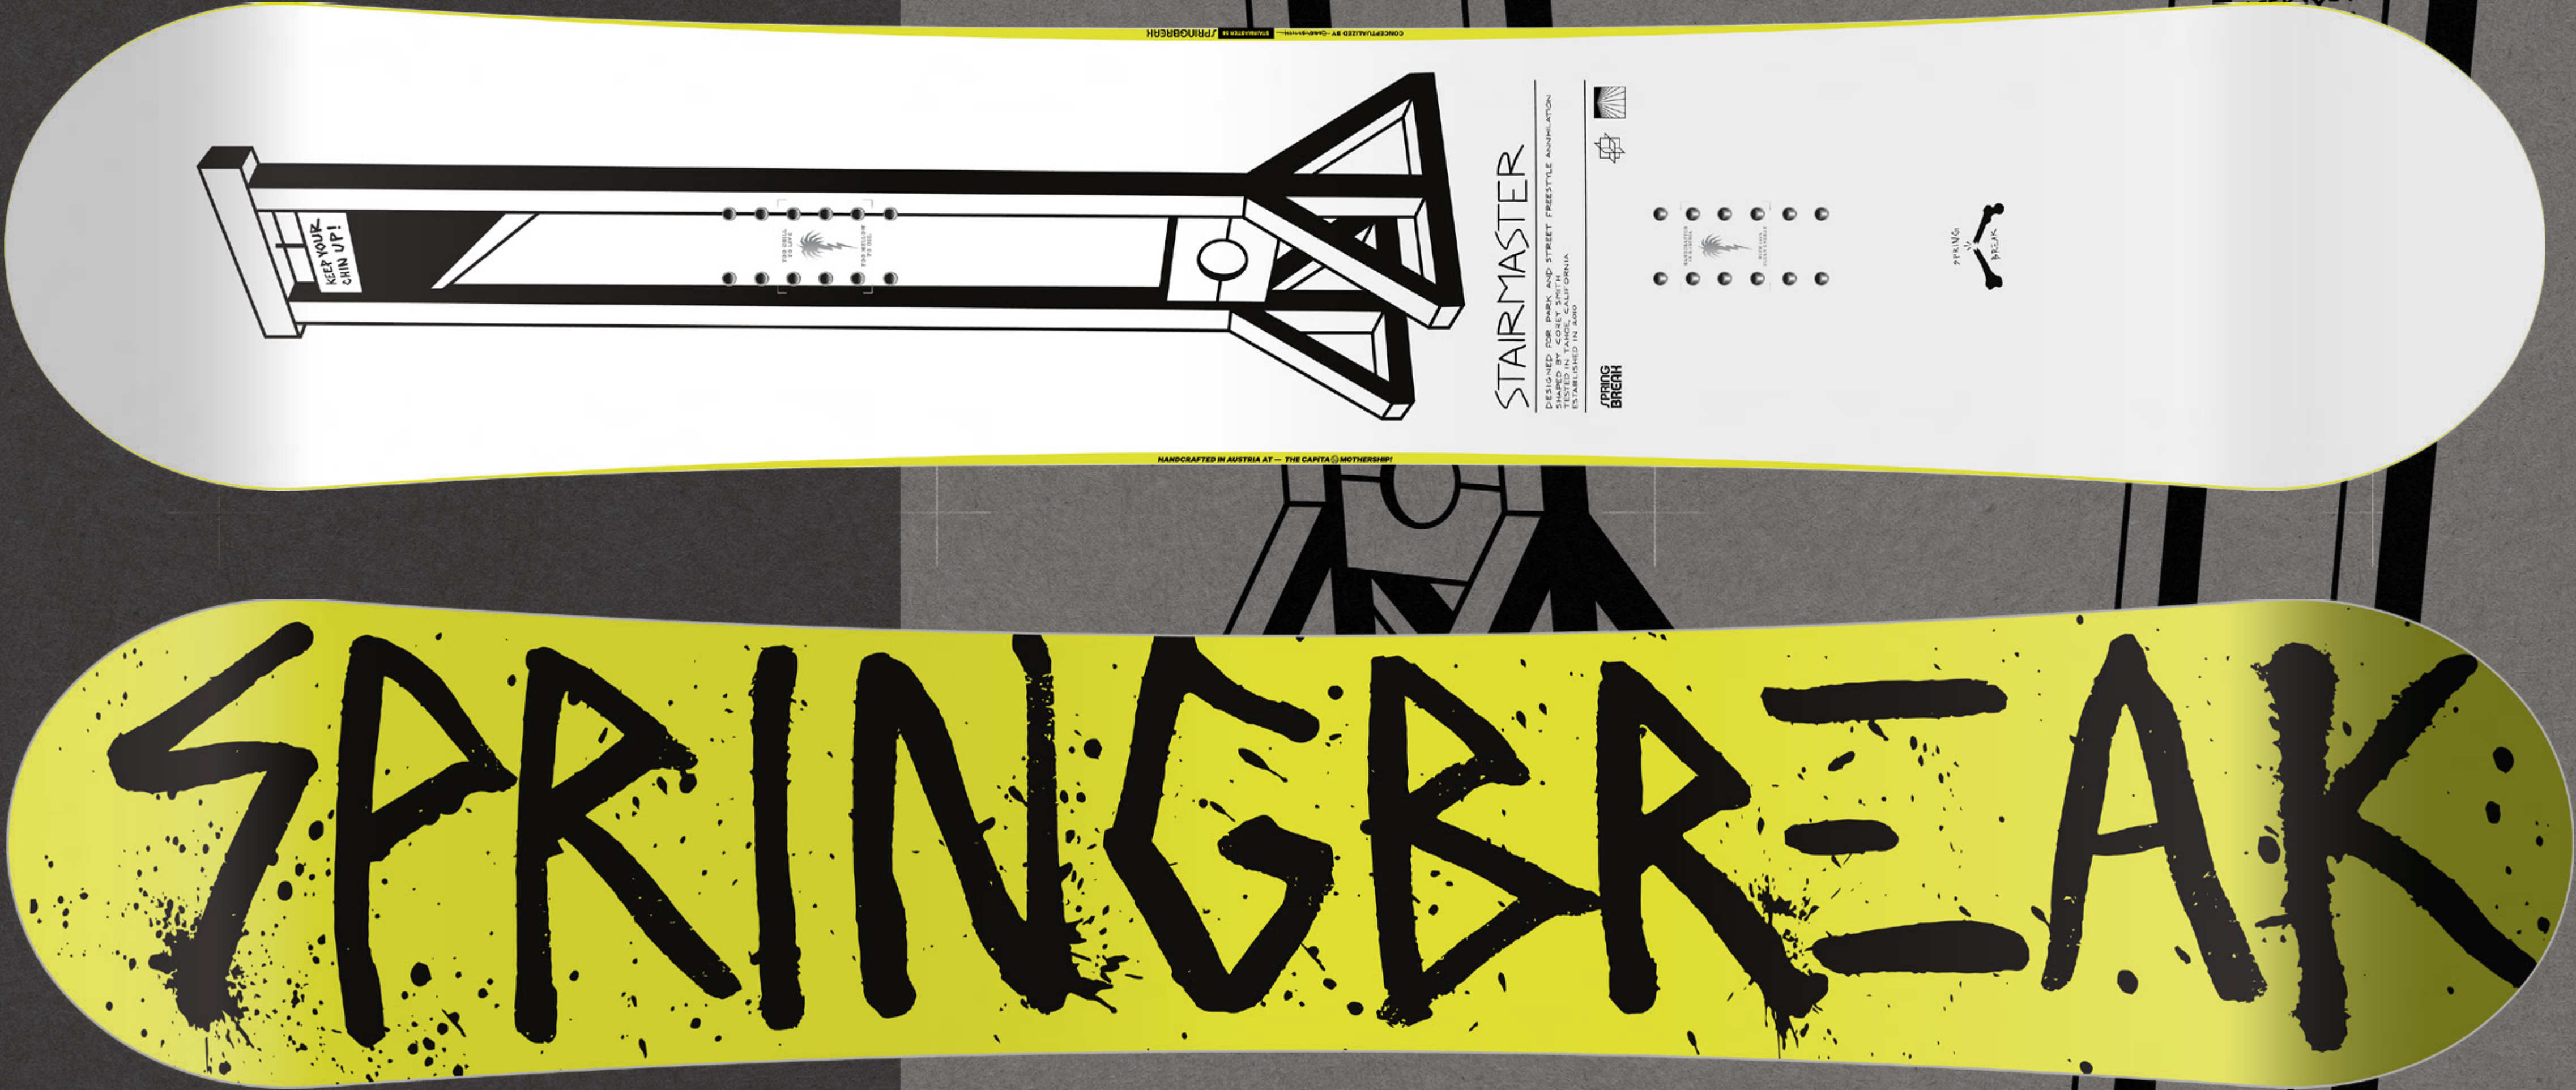

A legend in CAPiTA history, the *Stairmaster* debuted as a tough and affordable option for freestyle snowboarders holding a more skate-style mentality to product. With a purist approach, they wanted a simple yet proven construction with no unnecessary additives—and they wanted to buy it at a price that made sense knowing it will be ridden hard. The graphic direction was led by Corey Smith, and before long, the *Stairmaster* became a rider favorite. In fact, it was one of our most widely ridden boards for years.

The *Stairmaster* is back. This time under the Spring Break Snowboards umbrella, once again aesthetically curated and under the creative direction of Dr. Smith.

WOOD CORE COMPOSITIONS

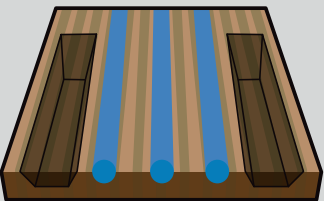

A snowboard’s *wood core* is the heart and soul of the riding experience.

This essential element determines the key character traits of a snowboard and functions as the primary building block for everything else that goes into a board. Every *CAPiTA* deck starts off with a specialized wood core allowing for uniform flex, greater turning control, and incredibly fast response. Different species of wood, along with custom core profiles, help give each deck a unique feel and targeted flex. We have engineered a series of wood core compositions, each with distinctive characteristics, to ensure that we have your ideal snowboard.

MAIN LINE

1

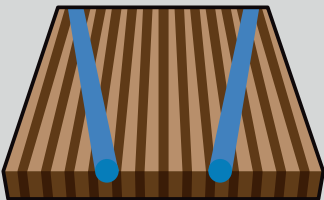

3D THERMOPOLYMER STARSHIP CORE™

■ PET ■ MEGA-PREMIUM POPLAR

- MEGA DEATH (NO 3D)
- MEGA MERC
- SUPER D.O.A.

Utilizing an advanced electronic sorting system allows us to select mega-premium, reforestation certified, *Poplar* graded by weight and grain consistency. Comparable to *Paulownia* in strength to weight ratio, this core retains the poppiness of *Poplar*, and then achieves a signature feel by adding bonded post-consumer recycled *Thermopolymer* channels to form an advanced hybrid core. This mega-premium core will blast you into space and beyond.

2

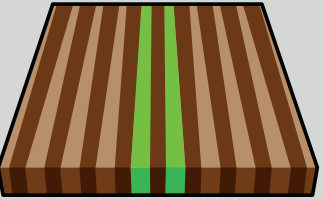

THERMOPOLYMER HOVER CORE™

■ PET ■ PAULOWNIA ■ POPLAR

- THE BLACK SNOWBOARD OF DEATH

Enhanced with bonded post-consumer recycled *Thermopolymer* channels into ultra-lightweight select grain wood core strips, the *THERMO-POLYMER HOVER Core™* is extremely light and strong with excellent dampening properties.

3

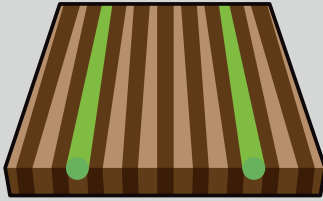

NEW! TRANSCEND CORE™

■ PAULOWNIA ■ POPLAR ■ BAMBOO

- THE MATRIARCH

Ultra lightweight core enhanced with full length *Bamboo Power Beams™* for maximum power and response.

3

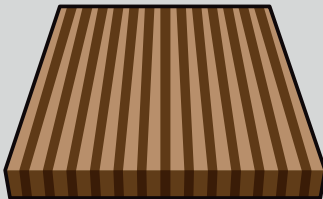

PANDA HOVER CORE™

■ PAULOWNIA ■ POPLAR ■ BAMBOO

- AERONAUT
- KAZU KOKUBO PRO

Ultra lightweight core enhanced with *Bamboo Power Rods™* for power and response.

4

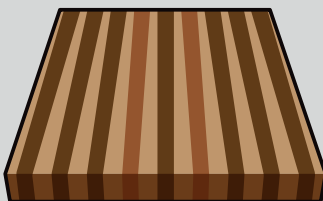

HOVER CORE™

■ PAULOWNIA ■ POPLAR

- MERCURY
- ARTEMIS
- THE NAVIGATOR
- SB POWDER RACERS

An energetic premium core that is ultralight and strong with excellent dampening properties.

5

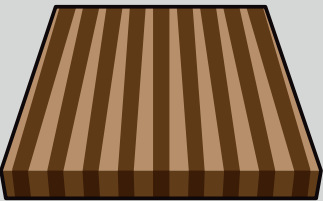

META CORE™

■ PAULOWNIA ■ POPLAR ■ BEECH

- INDOOR SURVIVAL
- THE EQUALIZER
- SB POWDER TWIN
- SB RESORT TWIN

We took our extremely lightweight *P2 Super-light Core™*, added high bending and shock absorbing *Beech* stringers running through the inserts for increased strength and even snappier pop.

6

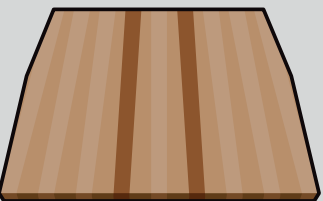

P2 SUPERLIGHT CORE™

■ PAULOWNIA ■ POPLAR

- D.O.A.
- BIRDS OF A FEATHER
- ULTRA FEAR

Extremely lightweight and versatile core combined with high impact resistance and maximum pop.

7

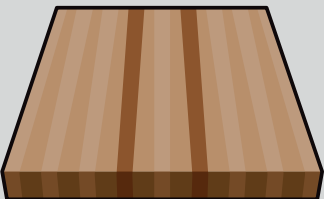

MULTIZONE CORE™

■ BEECH ■ POPLAR

- OUTERSPACE LIVING
- PARADISE

Poppy lightweight *Poplar* core combined with *Beech* for increased power and durability. Newly reengineered to taper between the insert packs for a more forgiving flex.

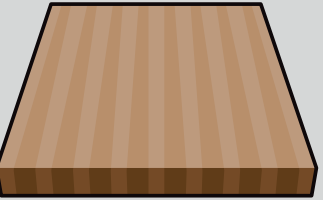

DUAL CORE™

■ BEECH ■ POPLAR

- SIDEWINDER
- PATHFINDER
- SPACE METAL
- SB SLUSH SLASHER 2.0
- R-SERIES

Poppy lightweight *Poplar* core combined with *Beech* for increased power and durability.

8

SELECT 2.0 CORE™

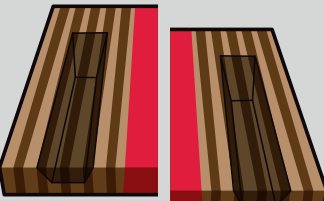

■ POPLAR

- CHILDREN OF THE POW
- GLOW UP
- YOUTH BRIGADE
- GLOW UP MINI
- YOUTH BRIGADE MINII

Poppy lightweight core with no irregularities for uniform flex and consistency. New wood core profiling for youth specific weight and flex optimization!

POWDER / SPLIT

1

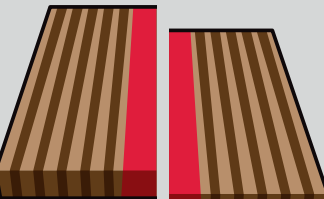

3D ASCEND 1 SPLIT CORE™

■ PAULOWNIA ■ POPLAR

- MEGA SPLIT

Mega-premium *Poplar* graded by weight and consistency aligned with *Paulownia* and an *ABS* centerline providing optimal strength to weight ratio. This high-end split specific core achieves a signature feel by utilizing a higher volume of thinner pressure-bonded *Paulownia* wood core strips for an ultra light weight chassis.

2

3D ASCEND 2 SPLIT CORE™

■ PAULOWNIA ■ POPLAR

- NAVIGATOR SPLIT

Premium weight-graded *Poplar* aligned with *Paulownia* and an *ABS* centerline resulting in a high-end split specific core. This core retains the primary poppiness of *Poplar* while remaining lightweight due to pressure-bonded dual-species wood core strips.

3

SURFLITE 4.0 CORE™

■ PAULOWNIA ■ MEGA-PREMIUM POPLAR

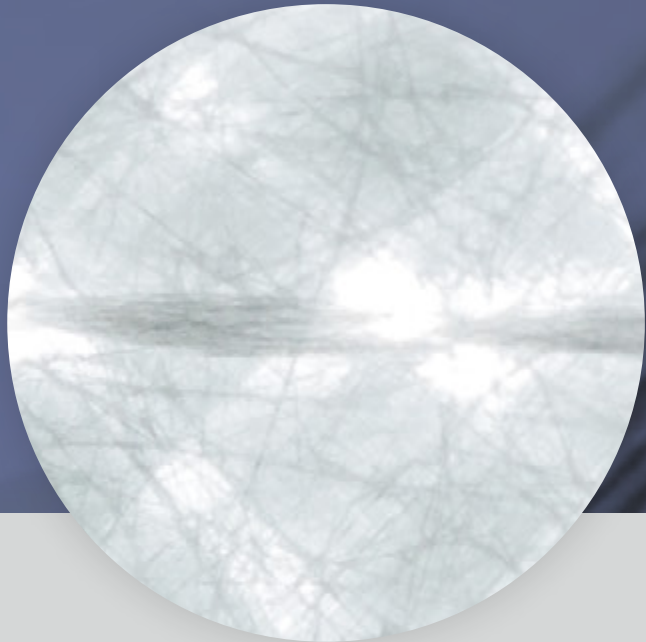

- SB POWDER GLIDER

Replacing balsa with ultra wide zones of flyweight *Paulownia*, and premium *Poplar*, we've managed to maintain the ultralight weight of the *SURFLITE* core while dramatically increasing its strength and durability.

FIBERGLASS

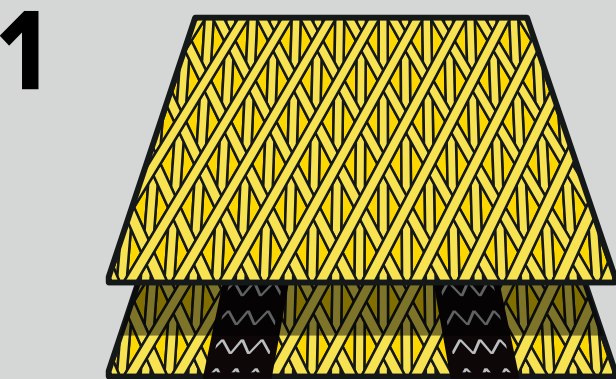

Laminated fiberglass is a key component when controlling the *strength and flex* of our boards.

Laminated fiberglass is used on the top and bottom of a board's wood core to protect it from water damage and is also a key component when controlling the strength and flex of our boards. When applying the resin, we use a mechanized dispensing system which accurately provides a calculated amount of resin per board to ensure the proper resin to glass ratio is being achieved. This process eliminates potential dry spots, preventing delamination and ensures no weight is added from excess resin. All *CAPiTA* boards are made this way and feature one of the following glass and resin configurations.

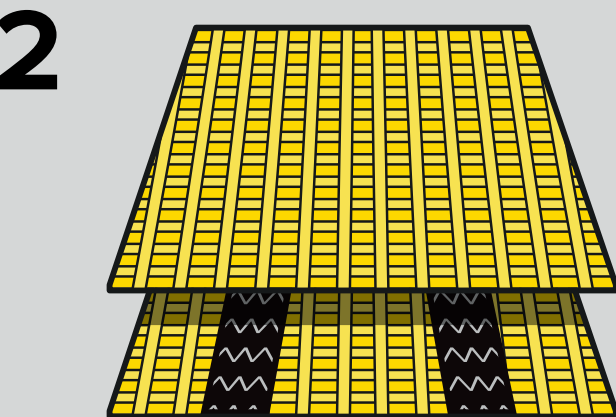

HYBRID HOLYSHEET™

Introducing the latest breakthrough from The MotherShip™: the *HYBRID HOLYSHEET™*. This cutting-edge development is the result of a collaborative effort with our glass supplier. We've ingeniously interwoven carbon additives directly into our *HOLYSHEET™* fiberglass, leading to a substantial enhancement in precision during layup and a notable reduction in weight.

HYBRID HOLYSHEET™ TRI/TRI MEGACARBON™ / SUPERCARBON™

HOLYSHEET™

The *HOLYSHEET™* fiberglass configuration features fiber weaves with a high tensile strength and low modulus of elasticity. With a higher roving count in the same weight of glass, you can have a stronger and more responsive board without adding extra weight. At the highest level, *Triaxial* fiberglass is placed on both the top and bottom of the core providing maximum strength, durability and performance, while many of our most sought after models feature *Triaxial* fiberglass on top of the core and *Biaxial* fiberglass beneath, creating a perfectly blended ride while increasing strength and durability. Combine one of these three layups with the *MAGIC BEAN™* resin and one of the many additives we have available, and you get an incredibly high performing board tailored to meet your style of riding.

SPECIAL BLEND

SPECIAL BLEND is an eco-friendly wet lay-up process that uses our *MAGIC BEAN™* resin component requiring lower consumption of energy and yielding higher technical properties. This adhesion process improves the factory's working environment, as it does not contain some of the same harsh chemical characteristics used in resins at other factories around the world. This configuration uses an optimum blend of 626g/m² *Biaxial* fiberglass laminated in conjunction with structural additives to customize performance objectives.

RESIN SYSTEM

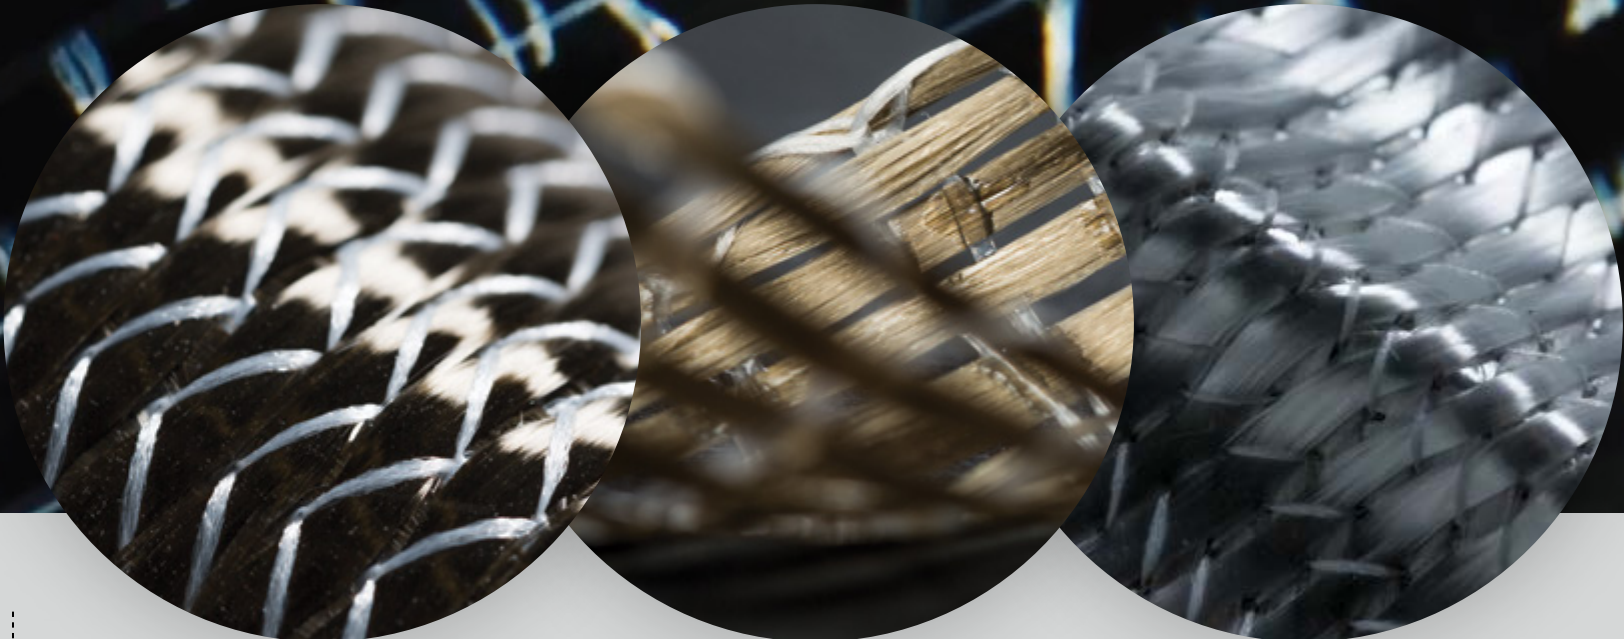

Resin is an essential production component that is not only paramount to the dry weight and on-snow response of a snowboard, but also to the production process and environmental impact as well. Our industry first *MAGIC BEAN™* resin is unique to snowboard production as it has been formulated to require lower process temperatures. A lower temperature requirement in the press equals less energy needed to make each board. This system plays a key role in the high efficiency of our production facility and aligns with our sustainable initiatives.

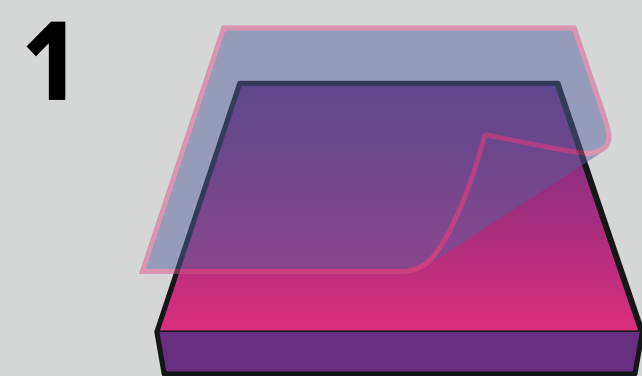

MAGIC BEAN™ RESIN

• ALL BOARDS EXCEPT MEGA DEATH AND MEGA SPLIT
Developed over a three-year span, this advanced resin system has a bio-content of 60% renewable, agricultural raw material. It is plant based that does not compete with primary food sources and is produced with no waste or greenhouse emissions. In production, it has a low-temperature requirement with a high yield output. This resin system is poppy, powerful, and extremely durable. *MAGIC BEAN™* resin yields much stronger and more rigid qualities allowing us to decrease the wood core thickness. Our focus is to save wood core weight by increasing resin performance. This means you get a lighter board while achieving higher energy return.

ADDITIVES

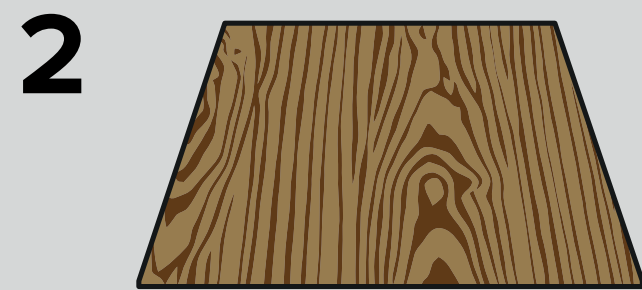

TOPSHEET

MEGALITE SKIN™ TOPSHEET

- MEGA MERC
- MEGA SPLIT

Super thin yet durable matte lamina for 60% weight reduction over our regular topsheets.

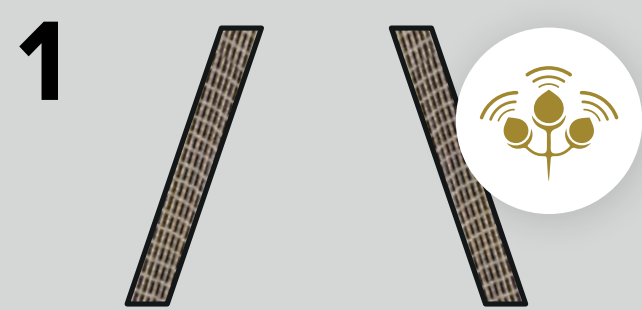

SKINLESS™ CORE ASH WOODGRAIN TOPSHEET

- KAZU KOKUBO PRO
- THE NAVIGATOR

Specially treated pure wood veneer topsheet with a unique tactile feel that is 220gm lighter than the standard process.

PERFORMANCE ENHANCER

CARBONFLAX™ V-TECH AMPLIFIER

- THE BLACK SNOWBOARD OF DEATH
- AERONAUT
- KAZU KOKUBO PRO
- MERCURY

CARBONFLAX™ is a next-generation natural flax fiber woven with carbon strands that is featured in our high-end snowboard constructions. This fusion tape brings the best of two worlds: the reactive energy of carbon and the lightweight and dampening aspects of flax. The two fibers are highly compatible since they have similar properties regarding thermal expansion and failure strain, creating a uniformly flexing reinforcement that's light, snappy and durable all in one.

TECHNORA™ FLAX BOOSTERS

- SB POWDER RACER SPLIT
- SB POWDER RACERS
- ARTEMIS
- THE NAVIGATOR
- THE EQUALIZER BY JESS KIMURA
- NAVIGATOR SPLIT

With an excellent tensile strength and fatigue resistance, *Technora*™ is an aramid fiber that functions as a shock absorber and energy source when integrated into a snowboard construction layup. We have interwoven *Technora*™ with an extremely lightweight and all-natural *Flax* fiber to invigorate every construction combination for maximum turning and ollie power.

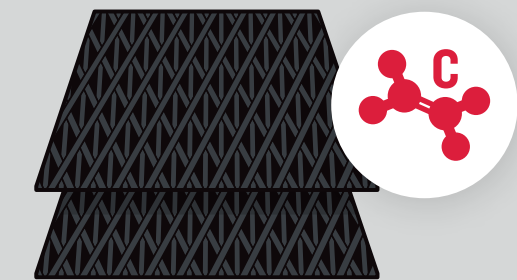

TITANAL CENTERLINE BOOSTER

- INDOOR SURVIVAL

Full length *Titanal* centerline that guarantees optimum stability and imparts ideal dampening properties.

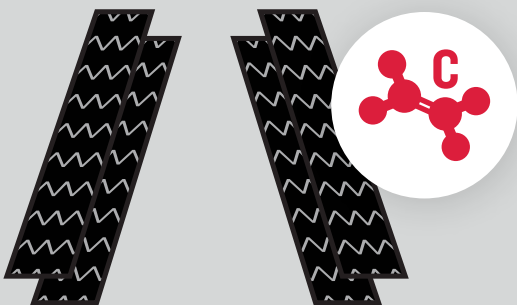

4 CARBON FIBER

Known for its rigidity, high-tensile strength, low weight, high-temperature tolerance, and low thermal expansion, *Carbon Fiber* is one of the most popular materials used in today's high-performance applications. We increase power and response on a wide range of models by integrating different adaptations of carbon fiber thickness, width, weight, or weave while ensuring our boards remain ultralight.

BASE + SIDEWALL (MATERIAL/TECH)

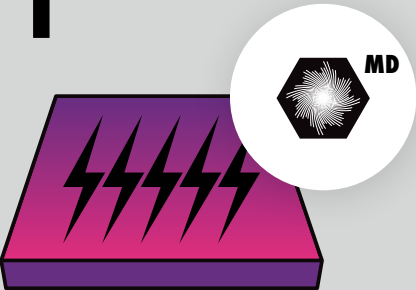

There are two basic types of base material used in our industry: *extruded* and *sintered*.

If you don't like to wax often and want something lower maintenance, extruded is for you. If you are more interested in going faster for longer and actually wax your board, sintered is your base. We offer unique variations of both compositions that reflect Polyethylene density, hardness, wax retention, and waxed—or unwaxed—speed.

SINTERED

1

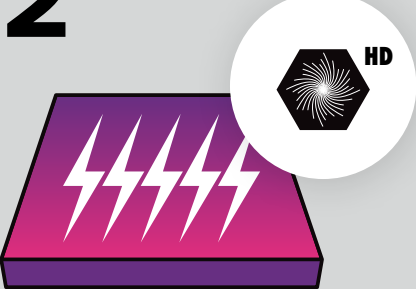

MEGADRIVE™ XT BASE

- MEGA SPLIT
- MEGA DEATH (XT)
- MEGA MERC (XT)

Striving to kit out our MEGA line-up with the most advanced and premium components, the all new MEGADRIVE™ base is as fast as science can make it. This is a pure race base composed of UHMW polyethylene modified with high carbon content and special fluoro additives for lightspeed gliding in a wide range of conditions. We have increased the thickness of our XT bases for enhanced durability.

2

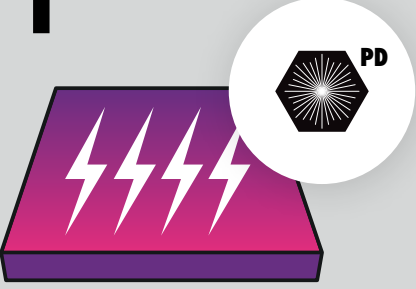

HYPERDRIVE™ / ADV XT BASE

- SUPER D.O.A. (ADV XT)
- THE MATRIARCH (ADV XT)
- THE BLACK SNOWBOARD OF DEATH (ADV XT)
- AERONAUT (ADV XT)
- KAZU KOKUBO PRO (ADV XT)
- MERCURY
- ARTEMIS
- THE NAVIGATOR
- NAVIGATOR SPLIT

Custom formulated and exclusive to *The Mother-Ship*, our engineers have worked tirelessly with the world's leading polyethylene running base supplier to create HYPERDRIVE™. With exceptional anti-friction properties due to high molecular mass and specialized processing aids, this sintered material has a proprietary composition and is beyond fast. Our loyal fans charge hard, and we have integrated the fastest, meanest base available. We have increased the thickness of our XT bases for enhanced durability.

SINTRUDED

1

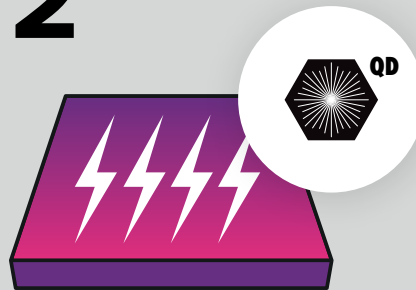

POWDER DRIVE™ BASE

- SB POWDER GLIDER
- SB POWDER RACER SPLIT
- SB POWDER RACERS
- SB POWDER TWIN
- SB RESORT TWIN

Dynamic and durable, easy to maintain and reliable, this base material is electric through the trees and fast over the flats. Featuring attributes of both sintered and extruded base material the POWDER DRIVE™ base was exclusively formulated for the extra-wide chassis of the Spring Break Powder Division and were designed with the powder lifestyle in mind.

SINTRUDED

2

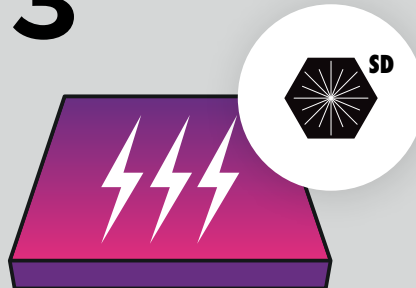

QUANTUM DRIVE™ BASE

- INDOOR SURVIVAL
- THE EQUALIZER BY JESS KIMURA
- DEFENDERS OF AWESOME
- BIRDS OF A FEATHER
- SIDEWINDER

The QUANTUM DRIVE™ running base is formulated with a progressive blend of compressed ultra-high-molecular-weight polyethylene. As an evolution from the already blazing fast SUPERDRIVE™, this running base features higher density for durability and absorbs more wax to wick longer and ride faster. Properly maintained sintered bases are fast, durable, and are the preferred choice of many high-end enthusiasts worldwide.

3

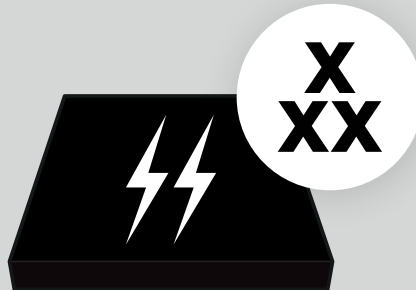

SUPERDRIVE™ / ADV BASE

- ULTRAFEAR (ADV)
- DARK HORSE (ADV)
- OUTERSPACE LIVING (ADV)
- PARADISE (ADV)
- PATHFINDER
- SPACE METAL

The SUPERDRIVE™ base material lives in the *Sintruded* category of boards that deliver benefits of both sintered and extruded bases. These bases take the characteristics and manufacturing techniques used in creating extruded base material, but due to higher pressure and temperature, increase the surface hardness to levels near most sintered bases. This expands the durability and surface strength, creating a base that will be more durable when jibbing and ripping around the mountain while retaining a low maintenance and carefree lifespan of the board. SUPERDRIVE™ is the benchmark for sintruded material while SUPERDRIVE™ ADV yields higher durability and glide performance.

EXTRUDED

XXX[TRUDED]™ BASE

- CHILDREN OF THE POW
- GLOW UP
- YOUTH BRIGADE
- GLOW UP MINI
- YOUTH BRIGADE MINI
- MICRO MINI

If there's one thing we know about kids and groms, it's that they can be hard on their gear and they're never going to wax their snowboard. The XXX[TRUDED] base material is a high density extruded base material that is durable and low maintenance. The relative surface strength equals a base that will last longer and be more durable when jibbing and ripping around the mountain.

BASE TECH

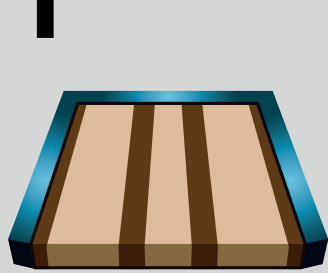

MOONSHOT OMNI-TUNE™

- MEGA SPLIT
- MEGA DEATH
- MEGA MERC
- SUPER D.O.A.
- THE BLACK SNOWBOARD OF DEATH
- KAZU KOKUBO PRO

The MOONSHOT OMNI-TUNE™ is an aftermarket high-performance race-base structure that wicks water from your base at a 45-degree angle making these boards fast as f*#k to the lift line or to the finish line.

SIDEWALL TECH

1

WATERJET CUT ABS1000 SIDEWALLS

- SB POWDER GLIDER

Waterjet cutting produces a stronger ABS sidewall as the ABS is milled to design specification rather than bent into its final shape. The process also produces zero heat thus the material's chemical structure remains intact.

2

1.5 mm FULL CORK EDGE DAMPENING SYSTEM

- ULTRAFEAR

Damp, durable, and lighter than rubber, our CORK EDGE DAMPENING SYSTEM is placed in between the steel edge and the ABS sidewall for increased protection from blunt force impacts. The ULTRAFEAR and the Scott Stevens Pro both feature a full contact length system for full edge dampening and protection.

3

FORTRESS™ KEVLAR BOUND SIDEWALLS

- SUPER D.O.A.

With seven *Transworld Good Wood Awards* in six years for the D.O.A. series, it's clear that the performance and value of these boards are unmatched. FORTRESS™ KEVLAR BOUND SIDEWALLS are bonded by a Kevlar "S" wrap from the top of the sidewall to the underside of the core. This lightweight technology binds the sidewall and core material together like no other.

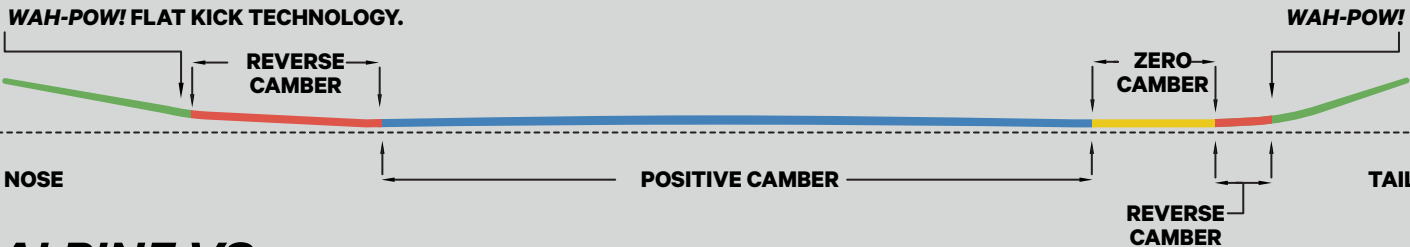

CAMBER OVERVIEW

ALPINE PROFILE

ALPINE V1

• MEGA DEATH • THE BLACK SNOWBOARD OF DEATH

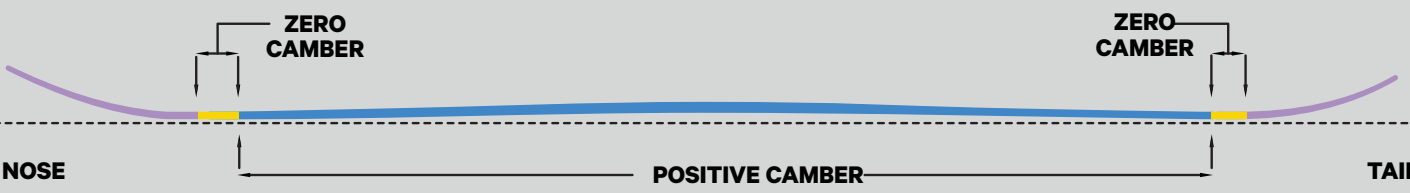

The *ALPINE V1 Profile* design features mid-body camber with a flat tail and a reverse cambered nose. This allows for tons of pop and stability on hard pack while increasing float and landing power, improving the rider's performance in deep snow. The camber runs longer in the tail—providing extra power for the ascent or for larger riders drawn to a dedicated wide series.

ALPINE V3

• AERONAUT

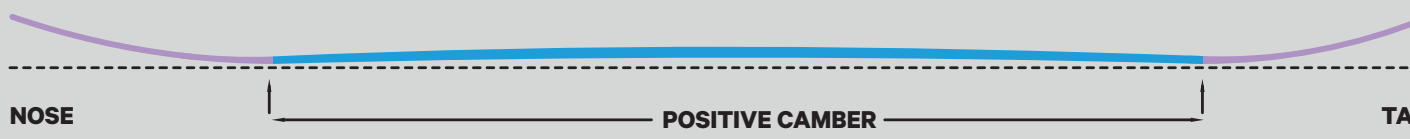

The *ALPINE V3* profile has a deeper traditional camber that zeros out before the end of the sidecut. The small zero camber sections provide a more controlled ride while retaining the response and power of a throwback cambered board.

ALPINE V4 DIRECTIONAL

• THE MATRIARCH

The *ALPINE V4* Profile features a higher traditional camber through the mid-section of the board with smooth and low tip and tail heights. Slightly elevated contact points along with big-radius tip shapes allow The Matriarch to flex like a freestyle machine and float like a powder board.

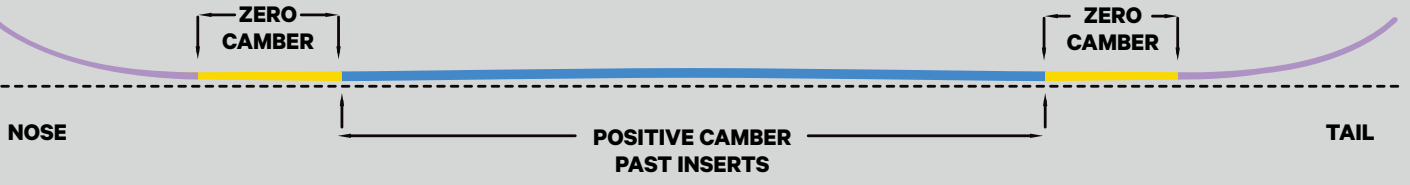

RESORT PROFILE

RESORT V1

• GLOW UP MINI • YOUTH BRIGADE MINI

Our *RESORT V1* Profile boards take full advantage of the benefits of traditional camber and zero camber. This next generation design allows you to get the pop and response of a cambered board with all the predictability and easy turn initiation of zero camber or reverse camber shapes.

RESORT V1 + FLAT KICK TECH

• SUPER D.O.A. • ULTRAFAEAR
• D.O.A. • BIRDS OF A FEATHER

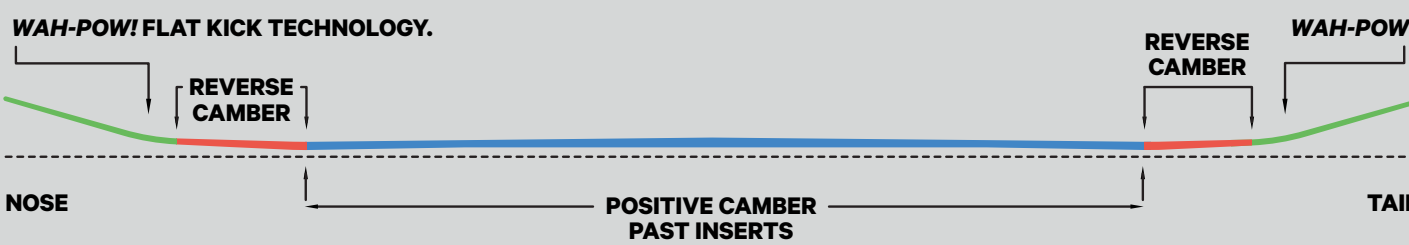

Our *RESORT V1* Profile boards take full advantage of the benefits of traditional camber, zero camber, and reverse camber. This next generation design allows you to get the pop and response of a cambered board with all the predictability and easy turn initiation of zero camber or reverse camber shapes.

RESORT V2 DIRECTIONAL

• MEGA SPLIT • MEGA MERC • MERCURY
• THE NAVIGATOR • NAVIGATOR SPLIT
• ARTEMIS • THE EQUALIZER

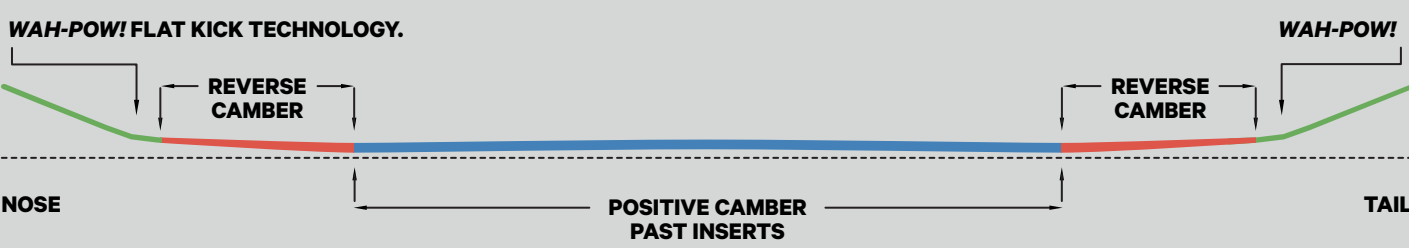

This revolutionary all-terrain shape provides the best of both worlds. It has a raised camber platform through the inserts to retain high-speed edge hold through variable terrain, elevated contact points to land and float in powder, and Flat Kick tip and tail arcs for faster, more aggressive transitions.

RESORT V2 TWIN

• SB RESORT TWIN

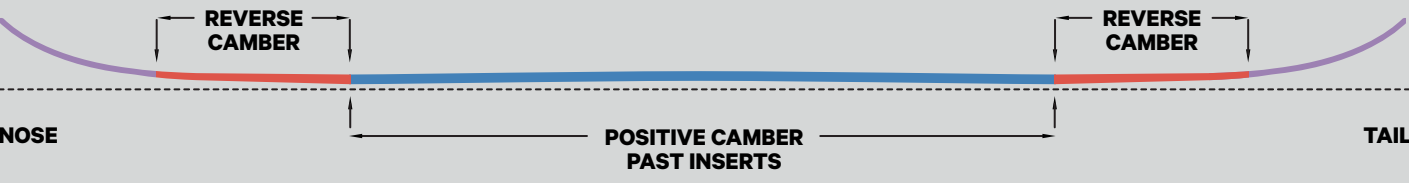

This revolutionary all-terrain shape provides the best of both worlds. It has a raised camber platform through the inserts to retain high-speed edge hold through variable terrain, elevated contact points to land and float in powder, and Flat Kick tip and tail arcs for faster, more aggressive transitions.

RESORT V3

• KAZU KOKUBO PRO • OUTERSPACE LIVING • PARADISE

The *RESORT V3* Profile maximizes versatility. It has a raised camber platform through the inserts to retain high-speed edge hold through variable terrain, elevated contact points to land and float in powder, and traditional tip and tail arcs for smoother transitions.

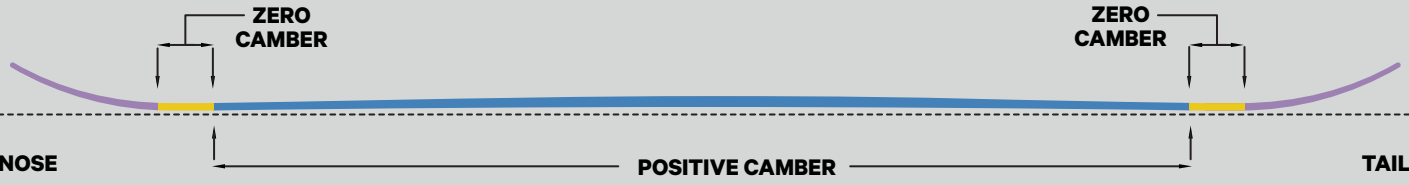

PARK PROFILE

PARK V1

• DARK HORSE • GLOW UP • YOUTH BRIGADE

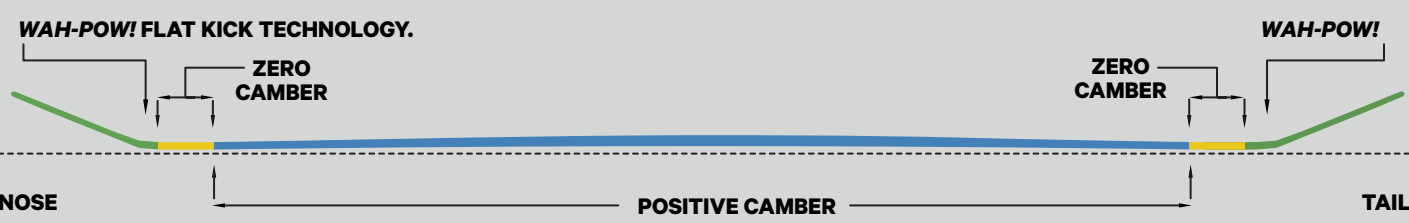

The *PARK V1* camber configuration zeros out a traditional camber approach 4 cm before the end of the sidecut. The small zero camber sections provide a more controlled ride while retaining the response and power of a cambered board.

PARK V1 + FLAT KICK TECH

• INDOOR SURVIVAL • PATHFINDER

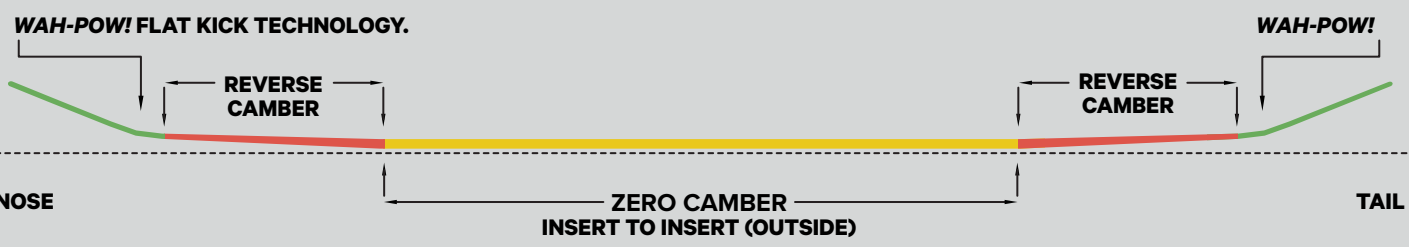

The *PARK V1* camber configuration zeros out a traditional camber approach 4 cm before the end of the sidecut transitioning into a Flat Kick nose and tail.

PARK V2

• SPACE METAL FANTASY

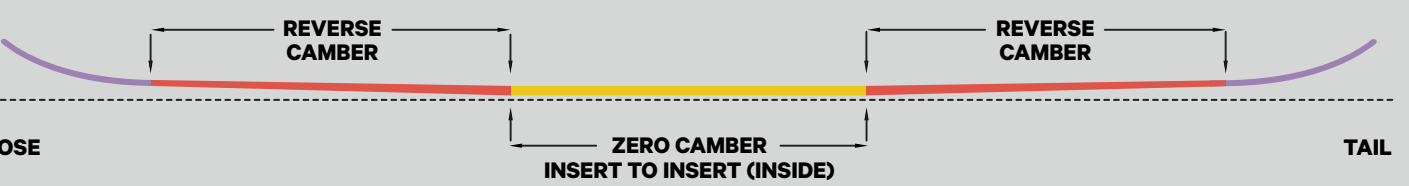

These versatile boards feature a dual reverse camber Flat Kick freestyle shape. A zero camber section throughout the insert area provides a stable skate-style feel, while elevated contact points turn on a dime and float effortlessly in powder.

PARK MINI

• MICRO MINI

Rockered and beveled for catch free riding.

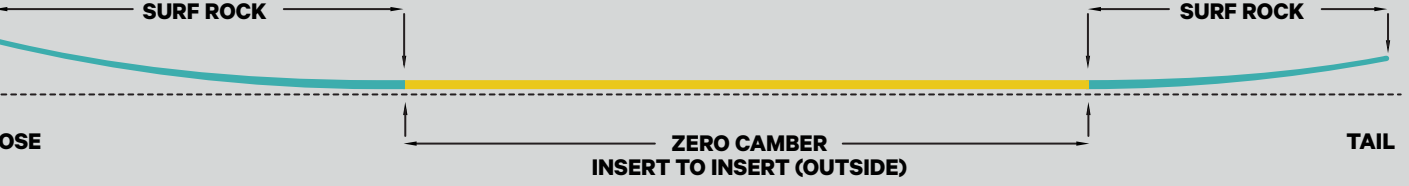

SURF ROCKER PROFILE

SURF ROCKER

• SB POWDER GLDER

The *SURF ROCKER* features a continuous arching tip and tail inspired by the modern design of many of today's best surfboards: flat through the inserts with smooth arching tip and tails. The gentle low angle allows for maximum float and control.

SURF CAMBER PROFILE

SURF CAMBER

• SB POWDER RACERS • SB SLUSH SLASHERS 2.0

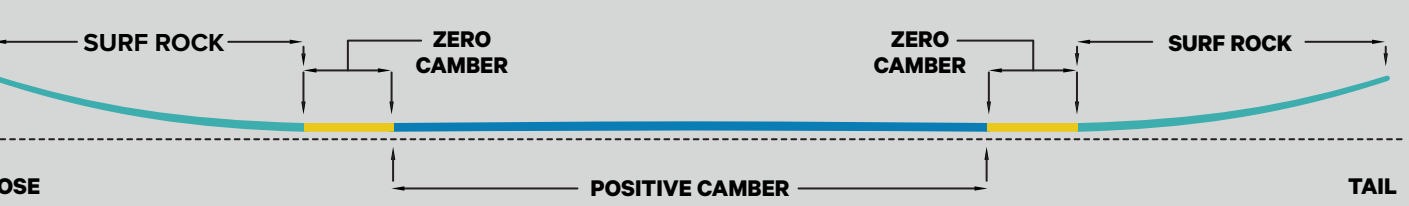

The *SURF CAMBER* features a continuous arching tip and tail inspired by the modern design of many of today's best surfboards: flat through the inserts with smooth arching tip and tails. The gentle low angle allows for maximum float and control.

SURF CAMBER TWIN

• SB POWDER TWIN

The *SURF ROCKER TWIN* features a raised camber platform through the inserts to retain a poppy freestyle feel over variable terrain and elevated low-angle contact points to land and float in powder.

SIDECUT

Sidecut dictates the board's *turning functionality*.

Sidecut is the arcing shape that the outer rails of the board take from the wide points near the nose and tail toward the narrow point in the middle of the board. Sidecut dictates the board's turning functionality along with the personality of a snowboard.

1

- MEGA SPLIT
- MEGA DEATH
- MEGA MERC
- THE BLACK SNOWBOARD OF DEATH
- MERCURY

NEW AGE PROGRESSIVE

Our *NEW AGE PROGRESSIVE* sidecuts are progressive sidecuts that incorporates *DEATH GRIP™*.

2

- INDOOR SURVIVAL
- SB RESORT TWIN

NEW AGE RADIAL

Our *NEW AGE RADIAL* sidecut employs the same arc from contact point to contact point allowing the board to have a true twin tip shape that utilizes *DEATH GRIP™* technology for enhanced control.

3

- AERONAUT
- SIDEWINDER

PROGRESSIVE

A *PROGRESSIVE* sidecut consists of two or more radii blended together to accommodate the three stages of a turn. They provide easy turn initiation while offering greater control throughout the turn and maximum power when exiting.

4

- THE OUTSIDERS
- ULTRAFEAR
- OUTERSPACE LIVING
- PARADISE
- PATHFINDER
- SPACE METAL
- SB SLUSH SLASHERS 2.0
- GLOW UP MINI
- YOUTH BRIGADE MINI
- MICRO MINI

RADIAL

A *RADIAL* sidecut is a single radius design that allows your board to start and finish a turn on the same arc.

5

- SUPER D.O.A.
- THE MATRIARCH
- ARTEMIS
- THE EQUALIZER BY JESS KIMURA
- SB POWDER TWIN
- D.O.A.
- BIRDS OF A FEATHER
- GLOW UP

BLENDED RADIAL

BLENDED RADIAL sidecuts feature a single radius arc through the midsection of the board combined with a custom designed blend zone at the contact points. Varying the length of these blend zones and tailoring them specifically for certain aspects of riding greatly improves a board's performance.

6

- SB POWDER GLIDER
- SB POWDER RACERS
- CHILDREN OF THE POW

SURF BLENDED RADIAL

Inspired by a combination of surfboard design and on snow riding functionality, the all new *SURF BLENDED RADIAL* sidecut is the ultimate powder surfing shape. This shape features a radial sidecut just through and past the inserts, followed by a huge smooth reverse blend zone and then topped off with a ton of taper. Surf the earth and get loose in the white room!

7

- KAZU KOKUBO PRO

RADICAL TAPER

Engineered for deep powder but still versatile around the mountain, this *RADIAL* sidecut is complemented by a *TAPERED TAIL*. This narrower tail section naturally sinks in the powder while the wider nose section floats above the snow line. The result is less work and more fun as the board surfs on one smooth continual arc.

8

- THE NAVIGATOR
- THE NAVIGATOR SPLIT

PARABOLIC

A *PARABOLIC* sidecut consists of a mirror-symmetrical curve. In snowboard terms, this design creates a board with a deeper sidecut and a quicker turning point in the center compared to radial arcs.

DEATH GRIP™

DEATH GRIP™ is a design theory that incorporates a reverse sidecut arc in the midsection of the board. This reverse camber arc provides a point of contact to apply pressure and retain control throughout the turn in both freestyle and freeride settings.

- MEGA SPLIT
- MEGA DEATH
- MEGA MERC
- THE BLACK SNOWBOARD OF DEATH
- MERCURY
- INDOOR SURVIVAL
- SB RESORT TWIN

FLAT KICK

With *CAPiTA's FLAT KICK* design technology, we've tightened the tip profile radius that blends the shoulders of the board into the tip and tail height on reverse camber boards. The tight tip radius in conjunction with tuned blend zones allows you to have a forgiving and easy to ride reverse camber board that is still responsive and quick during edge to edge transitions. This also creates a flat tip and tail which increases jibbing stability and also helps the board plane on top of powder creating float and control.

FLEX RATINGS

1

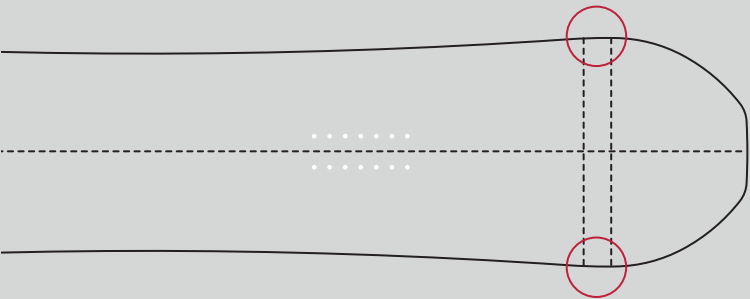

10

Technology integrated into snowboard construction affects many characteristics of a board's performance. Flex, along with weight, stability, energy and other factors come into play when considering whether a board is right for you. Flex may be the most important as it will determine how you are able to manipulate your board on snow. Soft, flexible boards are great for jibbing and overall command over your snowboard, especially in the park. They're easy to ride and very forgiving. Stiffer boards have more pop, more energy, and more stability at high speeds but they require more effort and skill from the rider as well.

All boards in this catalog are rated on a scale from 1 to 10. The number given is the estimated resistance the board may provide to the average customer.

1 would be the resistance of a noodle, 10 would be the resistance of a tree trunk.

BLEND ZONES

All snowboard shapes are designed with four blend zones. This is the area after the sidecut ends and before the nose or tail shape starts. In this small section, the shape of the board must transition from a sidecut arc going one direction into the tip shape arc going in the opposite direction. This critical section of the board is similar to the steering system in your car. It's the driving force in initiating turns and determining where your board is going. A poorly designed blend zone will cause your board to be hooky or turn slowly and could limit your ability to transition between edges. *CAPiTA* has taken the time to pay distinct attention to this detail; fine-tuning each and every board

PRINTING TECH

At *CAPiTA*, not only do we strive to make the most *Totally Incredible Technical Snowboards™* in the world, we think it’s important that they look beautiful too.

The fact is, getting snowboards to look AMAZING is hard. The technical requirements for bonding and durability in extreme climatic and physical conditions severely limits options, and these challenges keep most companies confined to standard methods. The result is often a lifeless, soulless, reproduction that fails to explore the particular possibilities of each graphic. Through rigorous testing, wild experimentation and hard-earned experience, our mad art scientists have developed new techniques that maximize each graphic’s unique potential. Our mission is to completely surpass what was once technically impossible.

1 DEEPSPACE™ DESIGN THEORY

You don’t like shallow humans, so why would you like shallow topsheets? The *DEEPSPACE™ Design Theory* takes advantage of the thickness of a transparent topsheet. Strategically layering ink on multiple levels from the top and the bottom we are able to imbue our graphics with a sense of life through depth.

Simple in theory, it requires an expert knowledge of ink bonding characteristics and curing times to make production efficient and technically feasible.

It’s also expensive as hell, and considered to be cost prohibitive for many of our competitors.

2 PAM16000™ PRINTING

Our mad art scientists at *The MotherShip* needed more power. And at *CAPiTA* where *Everything Is Possible™*, ask and ye shall receive.

PAM is now *TWICE* as powerful. She can make *TWICE* as much art. And she is *TWICE* the machine as she was last year. Spec’d out to the max with a mind-boggling *SIXTEEN THOUSAND* ink jet nozzles, *PAM16000™* makes our knees weak, and our hearts palpatate.

She can now spit out solventless, water based UV inks at twice the speed, with the same deadly accuracy and quality.

DEEPSPACE™ AT WARPSPEED. The future is now.

3 SILKSCREEN

ROCK POSTERS. The best ones are screen-printed, framed and enviously eyed by bros at the man cave. They are awesome because they’re handmade with love, and so are our silkscreened top sheets. Unbeknownst to most people, the *CAPiTA MFG* print shop is staffed by a merry band of tough as nails Austrian mothers who enjoy tea and apfelstrudel after work. Next time you notice how the colors pop like crazy on your topsheet, thank these ladies as each topsheet is like a hand-knitted sweater from Mom.

4 DIE-CUT

Super precise laser-guided, die cutting technology enable sharp edges and poppy AF solid color for our bases. It’s an Herculean feat to assemble all the little pieces back together again but *gaaaddamn* it looks fine.

6 SUBLIMATION

Sublimation is an exact science for an inexact process. In sublimation, ink is pushed through a substrate into base material using pressure and heat.

As base material is thicker and more opaque than topsheets, graphics become more vibrant when ink impregnates the material as opposed to other techniques where the ink is applied to one side or the other. Through sublimation, ink sits closer to the sliding surface and this technique excels when full colors are required. Many long nights were spent tinkering with a complex combination of cook-times, pressure and temperature in a highly controlled environment to achieve some of *CAPiTA*’s signature base graphics.

7 MULTITECH™

Voltron was awesome because it was one robot made up of a bunch of other robots. Sometimes if we find utilizing a single technique just isn’t enough, we open up the armory and stack one process on top of another!

Whether it’s a *PAM16000™* printed topsheet with silkscreen embellishments, or a sublimated base with silkscreen and die-cut pieces, *MULTITECH™* sends you further into *DEEPSPACE™*.

8 PLT TOPSHEET TECHNOLOGY™

The *PLT™* machine sits in a secret hidden corner of the factory behind two very unassuming, nondescript metal doors. The *PLT™* is so secretive that all visitors to the room must be versed in an ever-changing secret handshake.

PLT™ technology is exclusive to *CAPiTA MFG* and magically bonds the topsheet to an already pressed snowboard.

This is magical because the rest of the world mashes their topsheets on with glue, heat and pressure during the pressing stage. Doing so causes the fiberglass structure underneath to show through the topsheet. And because nobody wants to spend their hard earned cash on a bumpy snowboard, many companies slather their tops with a thick toxic lacquer to smooth things out. Not only is that shit *HEAVY* and can potentially develop unsightly hairline cracks, it’s also really unhealthy for the working environment.

The *PLT™* machine produces a featherlight, smooth, high-gloss finish, without all that poisonous deadweight.
